

Hackers are looking to exploit network vulnerabilities

## Don't leave the door open

More than half of UK businesses suffered a cyber-attack in 2019 (Hiscox, 2019) from cyber criminals looking for, and finding, vulnerable areas that they could exploit in an organisation's security defence.

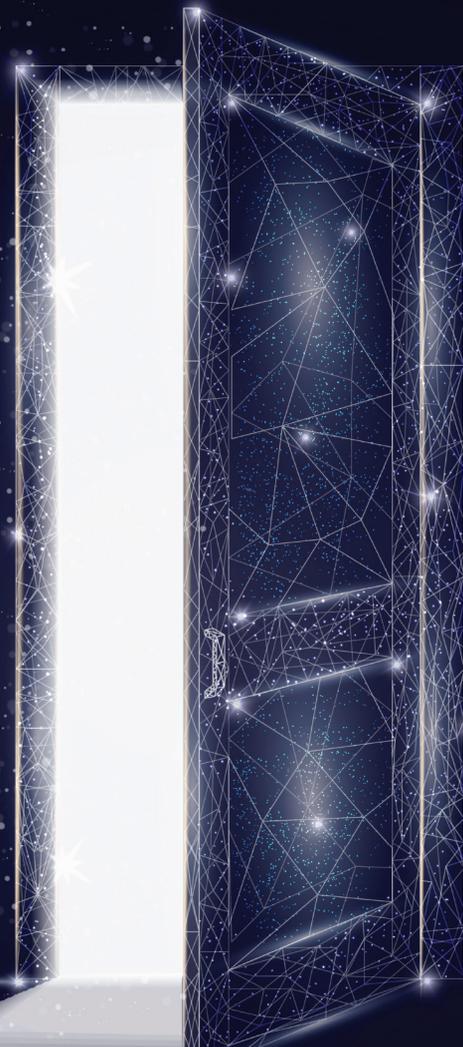

Ongoing vulnerability management demonstrates a proactive approach to reducing potential security holes in your network. It is vital that organisations can identify and mitigate weaknesses in their network caused from mis-configurations or flawed programming within a network-based asset such as a firewall, router, web server, application server etc.

Due to the scale and speed at which we deploy systems and networks today, a more frequent method of scanning for vulnerabilities is required – the world of the “annual pen test” is long gone!

### Identify & Protect Vulnerability Management-as-a-Service

**Citadel Managed Vulnerability Scanning** is a fully managed service designed to locate and report known network and computer system vulnerabilities.

It is a cloud-based service that regularly scans your network and IT infrastructure; providing detailed reports that can drive remediation, close gaps in security, improve visibility and reduce the risk to the organisation from cyber threats.

### Vulnerability Management-as-a-Service (VMaaS)

#### Key Features

- Up-to-date security posture for informed decision making
- Helps to prioritise critical security risks
- Increase operational efficiency with the ability to deploy rapidly & flexibly
- UK-based cloud services
- Integrates with other Celerity Cyber Security Transformation Services
- ITIL Service Desk support for all service management, monitoring & reporting.

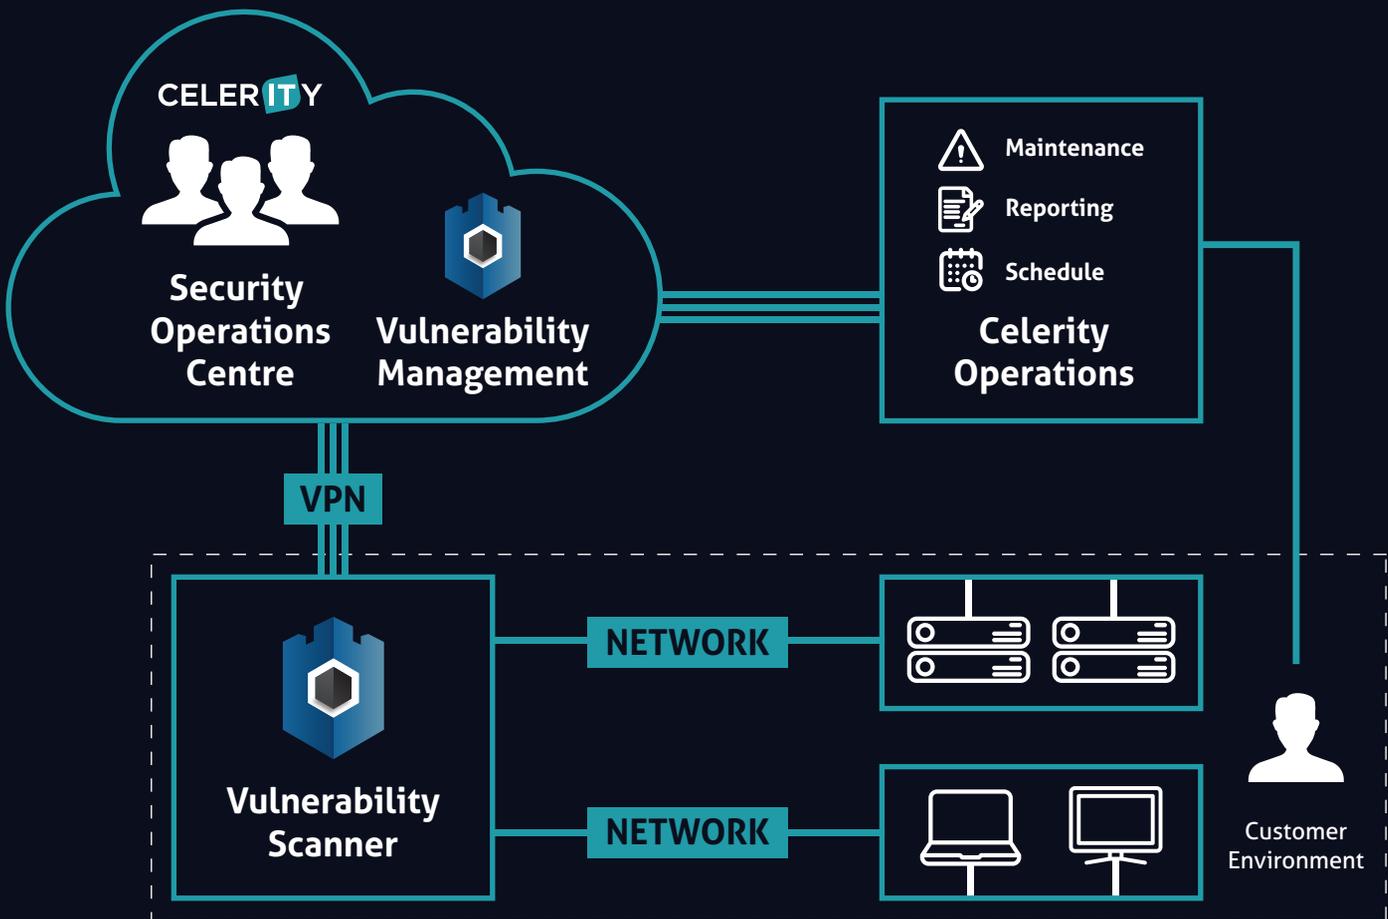

## Citadel Security Hub Appliance

The Citadel Security Hub is an appliance that will be installed into the local customer data centre to deliver service from the Citadel managed vulnerability scanning platform. It is a required component and sits within the customers infrastructure. The security hub is managed by Celerity.

## Celerity Operations Centre (SOC)

The Celerity Security Operations Centre is tightly integrated with Citadel Security-as-a-Service and all of the elements that it comprises of. The SOC provides:

- Management of alerts
- Monitoring of the Citadel Security-as-a-Service Platform
- Management of customer services

# CELERITY

Celerity, working in partnership with NCSC, regional cyber protection units & certified industry specialists to fight the war on cyber-crime.
