rego niversity 2019 SAN DIEGO

Manage Schedules Externally - MSP/Smartsheet | OOTB and Rego Connectors

Your Guides: Grant Zemont and Michael Meyers

- Take 5 Minutes
- Turn to a Person Near You
- Introduce Yourself
- Business Cards

regoUniversity 2019

- Introduction
- Why use an External Scheduler and Who Uses What?
- Pro's and Con's of using the Schedulers
- Decision Factors
- Options, Settings, & Scheduling Modes
- Managing Views
- ServiceNow OOTB MSP Connector vs. Rego MSP Connector
- Opening and Saving Projects
- Mapping fields with the Rego Connector
- Smartsheet Use Cases

- ✓ Microsoft Excel
- ✓ Microsoft Project
- ✓ Smartsheet
- ✓ ServiceNow Planning Console
- ✓ Other?

Tool Differences and Decision Factors

- 1. Planning Console
- 2. Microsoft Project 2013/2016/2019/Office 365
- 3. Smartsheet
- Organizations should select ONE ServiceNow scheduling option or at the very least, ONE scheduling option per project.
- Each option uses a different scheduling algorithm, so if a project schedule is opened in one and then another, it will calculate on top of a calculation.

ServiceNow's Planning Console will update the project schedule based on task duration.

- Comes with ServiceNow
- Integrates with Live Feed so users can collaborate on projects
- Simple "no frills" way to develop and manage a WBS

Microsoft Project will update the project schedule based on task duration.

- Algorithm is date driven
- Custom fields need to be mapped into ServiceNow
- MSP license required for each user
- Additional ServiceNow/ MSP training may be necessary

Smartsheet will update the project schedule based on task duration.

- 1. Algorithm is date driven
- 2. Use the power of all of Smartsheets' features and only sync back the data you need
- 3. Can integrate with schedules, or **any other table** within ServiceNow (e.g. Risks, Incidents, Changes, etc.)
- 4. Can export schedules as MSP files

rego niversity 2

Decision Factors PC vs. MSP vs. Smartsheet?

- If MSP is widely used and accepted within the organization
- If project plans need to be externally communicated via MSP
- If project assignments are task driven

smartsheet

- If Smartsheet already exists within the PM organization
- If there is a desire for a flexible, lightweight scheduling tool
- If project assignments are task driven

regouniversity 2019

- If there's minimal MSP or Smartsheet experience in the organization
- If there is a desire for PM's to completely stay within the ServiceNow ecosystem

servicenow

Microsoft Project

Each Organization should have the Project Settings identically set on each workstation.

- It is difficult to troubleshoot an issue if the settings are different on every workstation
- Users should be playing on the same field—not doing their own thing
- ✓Use established best practice guidelines for project settings for each tool
- Explain to your Project Managers what each option does so they understand how it affects their project schedule

12

MSP Options – Schedule Tab (1)

- Calendar Options: The "Week starts on" and "Fiscal year starts in" calendar fields should match your calendar settings in ServiceNow. The other MSP calendar fields will map through the integration
- 2. Scheduling Options for this Project: This should be set to "All New Projects" in order for the settings to be effective for all new projects and not just the one that is open
- 3. New Tasks Created: Automatic calculation is the preferred setting, but it is not required. If you select Manual Calculation, you must manually calculate the project before saving it to ServiceNow (more info on next slide)
- 4. Duration is entered in: Duration should be tracked in days since this is the lowest level that ServiceNow is able to track
- 5. Split in-progress Tasks: Helps fill in the work gaps while using Resource Leveling

	Project Options ?	X

	Autolink inserted or moved tasks	
	✓ Split in-progress tasks 0 6 ✓ New scheduled tasks have estimated durations	
	Update Manually Scheduled tasks when editing links Keep task on <u>n</u> earest working day when changing to Automatically Scheduled mode	~

MSP Options – Schedule Tab (2)

- 6. Schedule Alerts Options: This should be set to "All New Projects" in order for the settings to be effective for all new projects and not just the one that is open.
- 7. Calculate Project after each Edit: If "On" is selected, the project will automatically calculate after each edit. If set to "Off", task scheduling that occurs as a result of task dependencies (predecessors) will be turned off within MSP as well as when a project schedule is re-opened from ServiceNow to MSP (more info on next slides).
- 8. Calculation Options for this Project: This should be set to "All New Projects" in order for the settings to be effective for all new projects and not just the one that is open.
- **9. Updating Task status updates Resource Status:** If checked, resource actuals, remaining work are automatically updated when percent complete, actual duration, or remaining duration is updated. This open should ONLY be checked when Actual hours are NOT being tracked through ServiceNow timesheets. (more info on next slides).

MSP: A Word About Calculation Mode: Off

- DON'T USE IT!
- Even with it set to off (manually scheduled) there are scenarios where MSP WILL schedule your plan:
 - ServiceNow Timesheet Actuals can shift Task Dates
 - Resource Leveling will still recalculate the project schedule
 - Task Constraints may shift Task Dates
 - Dependencies will further change your schedule
- Instead Do This!
- Educate your users on how Microsoft Schedules your project plans (Rego can help!)
- Create Job Aids for common scheduling scenarios.

- When customizing views in MSP by rearranging columns or adding and removing fields, the changes are only visible in the project you're currently working on
- You can copy your customization to the Global Template, so all the changes are available in future projects, as well as projects that were created in the past
- To create a global template, open an empty project or the project that has the customization directly from MSP, go to File > Info > Organizer
- Global templates are useful to share so that all users are working in the same view (and easier to support!)

16

MSP Organizer – Use Your Views! (2)

Once the changes are made, you can see the active project's customizations on the right-side panel of the Organizer

- From the "Views" tab, highlight all of the views from the right-side panel and then click "<<Copy"
- Do the same for the "Tables" tab

OOTB Connector – Import from MSP

- 1. Save your project plan to .mpp file.
- 2. In ServiceNow select "Import from MS Project".
- 3. From the pop-up choose the project you just saved.

Microsoft Project Imp	ort	×
Importing MPP file into an Select an mpp file:	existing project will delete tasks created in S C:\Users\tauny\OneDrive\Des Browse	erviceNow. Learn more. Cancel Import

Microsoft Project OOTB Import and Export

- You can import Projects created in Microsoft Project 2003, 2007, 2010, 2013, or 2016 into the Project Management application.
- If you import a Microsoft Project into the instance as a new Project, a new Project is created, and tasks associated with the Project are added as Project Tasks. Only the fields that are common or mapped between the applications are imported.
- If you import a Microsoft Project file to an existing project, it will fail if any of the following conditions are true:
 - If the project has tasks that were created in ServiceNow prior to import.
 - If you create new tasks in ServiceNow in a project which was imported from Microsoft Project earlier, and then
 reimport. Note: If you want to retain the project tasks that were created in the ServiceNow project, then you
 must export the ServiceNow project into a Microsoft Project file. Then, reimport the file into ServiceNow.
 - If the values for lag or lead time dependencies are not in supported format. Positive lag time dependency values for days, hours and minutes are allowed. Negative lag time dependencies are allowed only for days.
 - All other elapsed duration types from MS Project such as edays, emins, eweeks, and lead or lag in percentage are not allowed for import.
- Recalculation does not happen on project tasks when they are imported from the Microsoft Project file. Once the project is in the ServiceNow system, it would be treated as a manual project.
- The WBS order of imported tasks is regenerated after import.

Text10 (Field used for syncing purposes)	Task Sys_Id
Project Header Title	Project name
Project Header Subject (Field used for syncing purposes)	Top Task Sys_Id
Resource	Assigned to [assigned_to]
Resource Group	Assignment Group

Rego Connector

The Microsoft Project Rego Connector is an Add-In inside MSP that allows Project Managers to log into ServiceNow, "check out" their project schedules, work with them in MSP, then save right back to ServiceNow without ever needing to go into ServiceNow itself.

Rego Connector – Lock Alert Message

• The Rego Connector provides an alert when the project is opened in MSP

This project is being managed externally in MSP by taunya.moore It was last opened on 2019-03-15 17:54:15 and saved on . Any change you make may be overwritten.

- It DOES NOT prevent the user from making updates, as no fields are locked
- The alert is removed once the project is imported back to ServiceNow

Smartsheet

Smartsheet: Two Distinct Use Cases

Project Management Execution

- Initiate projects in ServiceNow, manage in Smartsheet
 - All tasks initiated in ServiceNow will show up in Smartsheet
 - Utilize templates in Smartsheet
 - All updates saved back in near real time
- ServiceNow acts as the repository for all Smartsheet
 - Govern and report on data in ServiceNow
- Custom field mapping
 - Map custom fields from ServiceNow to Smartsheet
 - Fields will get updated on save

Generic Mapping

- Map any ServiceNow table to a sheet
 - Select as many or as few objects that you want to map to sheets
- Data is updated in near real time
- Auto imports Smartsheet columns for easy setup
- Select columns for write back
 - Data will be updated back in ServiceNow based off changes in Smartsheet

Smartsheet: Project Management Execution

Smartsheet: Generic Mapping
