

Ætrium-2.1 SmartFarm

Data Sheet 10/2019

Ætrium-2.1 SmartFarm Components

The Ætrium Dosing Unit (**ADU**) is the main engine of the Ætrium-2.1 SmartFarm. It controls all water, air, and electrical operations.

Plants are cultivated in the **Growth Space**. This is where the growth trays with the spray manifold system are located. The Growth Space can be configured to have 24, 48 or 72 growth trays. Each tray can support up to 63 clone or seed cups.

Each growth tray is illuminated by one LED Panel.

The LED Panels are driven by the Sectional Power Distribution Units (SPDUs).

Power Distribution Unit (PDU)

The **PDU** links the ADU either wirelessly via an Access Point or via an ethernet connection to the server that runs the GuardianTM Grow Manager. It directly controls the Dosing Module, the ACU, the DCU, the WSE, the ASD, and the SPDUs in the Growth Space.

AC Relay Controller (ACU)

The **ACU** contains all AC relays that enable the Irrigation Pumps and Return Water Pump.

DC Relay Controller (DCU)

The **DCU** contains all DC relays that enable the 24V Valves.

Irrigation Pumps

The two Irrigation Pumps move water from the Reservoir through the pipes to the manifold spray heads in the Growth Space. They alternate their duty cycle and provide complete redundancy in case of failure. Each pump has a Sediment Filter attached to it. The 24/48 tray unit share a pump size and the 72 tray unit uses bigger pumps.

Return Water Pump

The Return Water Pump moves water from the grow trays in the Growth Space back to the Reservoir.

Dosing Module

Driven by Guardian[™] Grow Manager the Dosing Module adds a programmed ratio of fertilizer and amendments to the water in the Reservoir. It consists of Dosing Bottles and Peristaltic Doser Pumps controlled by Stepper Motor (doser) Controllers (**SMC**).

Reservoir

The Reservoir is the storage tank for nutrient rich water circulated through the Growth Space. To maintain optimal conditions of the nutrient solution to support healthy roots, a chiller is recommended to manage and control temperature. A separate mechanical chiller or an optional stainless steel loop of chilled liquid is recommended. Chilling can be controlled by the Guardian Grow Manager.

Valves

The automatically controlled 24 volt DC valves enable individual irrigation patterns for each layer in the Growth Space. The Pressure Relief Valves (PRV) are manually adjustable diaphragm valves for fine tuning pressure under the growth trays. The Manual Valves can be used to shut off water to certain parts of the Growth Space during servicing.

Sensors

The Water Pressure Sensors (WTP), the Water Sensing Module (WSE), and the AEtrium System Detector (ASD) provide accurate feedback to the GuardianTM Grow Manager on water pressure, level, pH, water temperature, electrical conductivity, air temperature, relative humidity, CO_2 level, and light intensity (ON/OFF).

Backup Power

In areas where one could suffer from loss of mains power it is highly recommended that the ADU be supplied with power from a backup source to assure that the plants continue to get fertigated. The control network, and its components, should also be on backup power.

SmartFarm LED Lights in the Ætrium-2.1

Each SmartFarm sectional grow space contains one Sectional Power Distribution Unit (SPDU) and 12 LED panels. The SPDUs are able to drive 12 LED lists and four 24V DC fans. Each SmartFarm LED light serves one Ætrium-2.1 tray.

Typical Ætrium-2.1 Shipping Configuration

Major Ætrium-2.1 components	Dimensions (L x W x H)	Weight
ADU on pallet	64.5" x 31.25" x 83.5" (1638 x 794 x 2121mm)	525 lbs (238 kg)
ADU off of pallet (shipping configuration)	64.5" x 31.25" x 77.5" (1638 x 794 x 1969mm)	
Growth Space Module (with top layer broken down) on pallet	78.25" x 31" x 88.5" (1988 x 787 x 2247mm)	705 lbs (320 kg)
Growth Space Module (with top layer broken down) off pallet	78.25" x 31" x 83" (1988 x 787 x 2108mm)	
Wood Crate of Parts on pallet	50" x 36" x 54" (1270 x 914 x 1372mm)	655 lbs (297 kg)

Ætrium-2.1 Shipping and installation

The ADU ships on a pallet and each of the Growth Space modules ship on a pallet. A 24 tray unit ships on 3 pallets and a 48 tray units ships on 5 pallets. It is recommended to unload the AEtrium-2.1 components from their pallets using a forklift. Once unloaded from the pallets the ADU and growth space modules will roll on pre-installed casters. The Growth Space modules are shipped with the top layer broken down so that they are not too tall to fit in shipping containers. It's easily lifted to its final position using two people during assembly.

• Door size for installation: Grow room doors are recommended to be at least 84" x 36" (2286 x 914mm) to accommodate moving in the AEtrium-2.1 when it is depalletized.
