

Are You Taking Full Advantage of Epic's Analytics Features?

Keeping up with the ever-changing Epic Analytics landscape is a common challenge. This ever-evolving and greatly-expanding area is very exciting, but can also be overwhelming as there are so many areas of opportunity. It is often a struggle to ensure that features are implemented, content and strategy are optimized, and processes are updated to reflect the latest recommendations. CereCore will help you identify and prioritize how to optimize your current Epic Analytics approach and offers solutions to these obstacles in our various Reporting Services offerings.

Processes, Governance, and Prioritization

Clear and comprehensive report request, prioritization, and governance processes are key to identifying reports that have the most positive impact on organizational goals. We will review your current-state processes to determine whether any gaps exist and/or suggest areas of expansion. Alternatively, if you do not have a current process, we are able to review current-state dynamics in order to suggest one that may work well for your organization and then work with you to implement the suggested approach.

Tools, Features, Content, and Approach

Over the years, Epic has developed an array of different tools and features to support both simple and advanced analytics capabilities. Our team will evaluate the tools and features you have in place as well as your organizational goals and create a strategy on how to align those two paths. An investigation into how your Epic reporting and analytics compares to industry standards, future organizational direction, and analytics sustainability could result in a clearer and more efficient processes for your reporting and analytics teams.

Staff Augmentation and Remote Reporting

The Epic Cogito reporting suite offers a variety of tools and features that require both maintenance and evolution to keep up with the rapidly expanding space of Analytics. Whether you simply need a team of expert report writers to handle report requests or a fully developed team to own the entirety of Epic's reporting offerings, we are able to adapt to the level of support that will most benefit your organization's goals. Our solutions range from single-person staff augmentation support, to a completely outsourced reporting team and remotely owning the entire process from request to delivery.

Discover how we can work together to maximize your Epic investment.
