I.T. SOLUTIONS FOR FOOD MANUFACTURING & DISTRIBUTION

How much control of your food production operation do you really have? Software with deep functionality linked to your physical facilities is key for developing a highly efficient operation.

LIDD helps you make better decisions regarding the selection, integration, optimization and ongoing support of I.T. systems for manufacturing, warehousing and distributing food.

LIDD'S SERVICES

SELECTION & IMPLEMENTATION OF WMS, MES, TMS & ERP SYSTEMS

Drawing on deep expertise in food manufacturing and distribution, we help you define your business requirements, test potential software, and select the pillars of an application park that work together. A unified approach will provide the insight and control required to run an efficient operation.

INTEGRATION & OPTIMIZATION OF SYSTEMS

The software you choose needs to have the right functionality, but the partner you select to help you implement it is just as critical to your success. We'll ask the right questions and test every possible angle to make sure your systems are configured and integrated optimally.

ONGOING SUPPORT

After a successful implementation, we can provide tech support and assist with any additional projects related to your supply chain infrastructure. Our team is highly trained in the technologies we support and is committed to helping you maintain a robust, reliable operation.

WHY LIDD?

Integrated Offering

We can help with mandates from facility design to technology selection and implementation.

Industry Veterans

LIDD's project teams are led by **highly experienced** professionals who have each managed dozens of supply chain engagements and implementations.

Food & Beverage Expertise

The majority of our clients come from the food & beverage industry, including food manufacturing, retail grocery, foodservice distribution and e-commerce grocery & meal kits.

OUR SUPPLY CHAIN INFRASTRUCTURE SERVICES

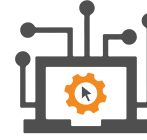

Facility Engineering

- Distribution center sizing & design
- Slotting analysis
- Capacity and productivity optimization
- Project commissioning of new facilities and expansions

Supply Chain Optimization

- Multi-site network studies
- E-commerce / omni-channel distribution
- Transportation resource analysis

Information Technology

- Selection of WMS, MES, TMS and ERP software
- Integration and optimization of systems
- Ongoing support
