

AlayaCare Electronic Visit Verification (EVV)

GPS-Enabled Mobile EVV Technology

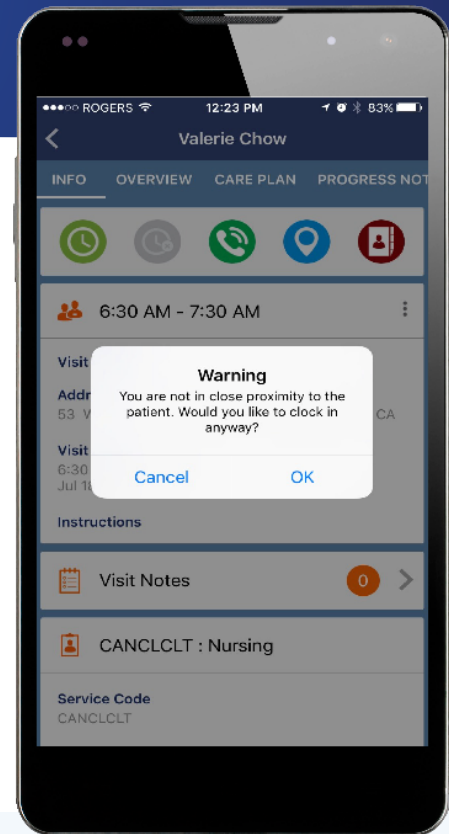

Comply with Government EVV Mandates and Beyond with Home Care's Most Powerful End-to-End Software

- ✓ Gain reliable proof of visit
- ✓ Increase compliance and efficiency
- ✓ Capture GPS-enabled verification or IVR (telephony)
- ✓ Generate date and time stamped visit reports
- ✓ Create and receive real-time schedule updates
- ✓ Categorize and analyze visit data
- ✓ Benefit from secure communication

Care Worker Mobile App

GPS-based mobile care management systems that provide top-level accountability, convenience, real-time verification and increased compliance offer superior flexibility over in-home devices for several reasons, including:

- Accurate tracking and monitoring of worker location and length of visits, eliminating the need for paper timesheets, reducing human error and saving time
- Real-time schedule changes at the point of care, with any visit details accessible and verifiable immediately
- Alerts to notify staff of delayed or missed visits, allowing for quick response to any scheduling issues, which may result in substantial cost savings

Proximity warning when care worker tries to clock-in out of range

AlayaCare has built in QA best practices. Business rules and logic streamline the approvals process. Visits that violate logic are flagged as red. Agencies can adjust certain settings for automated approval:

- Start time allowance (what is the permitted clock-in time vs. scheduled start time)
- Visit duration (what is the percentage of time completed vs. scheduled time)
- Authorizations (was a visit within the limits of the payer)
- GPS/Telephony exceptions (are there differences between GPS distance and a client's address)
- Tasks completed (what constitutes a required task that is finished)

Better Technology, Better Outcomes.
