

## OnGo Networks

**Zinwave provides innovative solutions for OnGo networks.** Enterprises like corporate campuses, commercial real estate, healthcare facilities, hotels, universities and more can install their own OnGo network to support business-critical applications with a robust, secure mobile network. An OnGo network gives businesses the optimal coverage, capacity and control required in a private environment. OnGo networks are deployed over Citizens Broadband Radio Service (CBRS) frequency spectrum. CBRS will allow for the densification of wireless networks to deliver speed and reliability.

Zinwave supports full interoperability between  
**OnGo and commercial LTE networks on one platform layer**
