

Frustrated with your flu program?

enterprise**health**

Mass immunization without the mass chaos.

Administering an influenza program often brings as many headaches as the virus itself. If you're experiencing symptoms like poor reporting, complicated compliance, and overclicked, overstressed staff — **the Enterprise Health Injection and Immunization Module is just what the doctor ordered.**

We built the Enterprise Health Injection and Immunization Module with **you** in mind. The administration of high-volume vaccination events (such as flu vaccines) are easily documented and managed. National Healthcare Safety Network (NHSN) reporting is standard out of the box, making tracking and compliance a piece of cake — keeping your focus where it should be, the people, not the process.

All standard. All paperless.

Standard functionality includes:

- > Electronic (i.e. paperless) registration via employee portal, including consent/declination form and questionnaire completion
- > NHSN reporting without spreadsheets — or confusion
- > Automated reporting to appropriate parties
- > Automated employee email notifications and reminders
- > Pre-loaded clinical decision support rules and alerts

With Enterprise Health, next year can be paper-free and headache-free.
