

Biocodex finds a cure for its integration challenges with SAP® Business One® Cloud

SAP Business One has simplified and reduced the time taken to manage business operations at the US subsidiary of independent pharmaceutical company, Biocodex. The installation of SAP Business One Cloud also gives Biocodex's head office in France much clearer visibility into its US operations.

Before: Challenges and Opportunities

- US subsidiary needed a validated system to support FDA requirement ahead of the Rx launch
- The US subsidiary uses a different financial reporting system to that of its parent company in France, and with the existing system there were some challenges in meeting head office's GAAP requirements

Why SAP and Accounting Micro Systems

- Biocodex already had SAP installed at its French head office and deploying a cloud-based solution to its US subsidiary was a natural fit
- Accounting Micro Systems is a leading SAP partner and was also experienced in Biocodex's legacy ERP platform in the US

After: Value-Driven Results

- Financial and management reports can be produced faster and with less manual involvement
- Documents can be shared between trading partners and with head office more easily, reducing the possibility of errors and speeding up the sharing of information
- There are fewer requests for IT support, since many processes have been automated and the software platform can be easily navigated by business users

Our SAP Business One implementation was successful because of our long working partnership with AMS. Biocodex had a financial application that was not validated which required us to upgrade and our parent company had identified SAP Business One. Partnering with AMS to assist with the implementation, I had confidence in their team to get the application implemented on time and under budget. Very proud to say we were able to accomplish our goals.
