

# What's The Deal With Managed Services?

Your Guide To Understanding Managed Services

 A managed services plan gives you **peace of mind** by knowing you're protected from cyber attacks. 

## SOFTWARE OPTIMIZATION

MSPs will recommend a trustworthy security software and optimize it without consuming your time.

## PREVENTATIVE MAINTENANCE

Keeping up on user licenses, security trends, and current cyber threats can be a drag. The right MSP will do it all for you for a fixed fee.

## Don't Cry, IT Guy

A managed service provider should not threaten your existing IT person's job. Plenty of organizations have both an IT person on staff **and** a managed services provider for support.

## RELIABLE TRAINING & SUPPORT

Your MSP should offer knowledgeable IT pros who give you reliable answers and quick support.

## NO EXPENSIVE DISASTERS

By paying a monthly fixed rate, you should never have downtime, and never get stuck with an expensive disaster recovery bill.

## So How Much Does It Cost?
