

D300 Healthcare Calling Solutions

JAYEX D300 – Healthcare Call Solutions

The LED (D300) patient call screen integrates with appointment systems and enables you to call your patients with the click of a button. Designed to improve practice work flow efficiencies and save staff valuable time, the D300 is accurate, quick and reliable. With clear, red LED text and audio alerts, the D300 easily catches patients' attention and facilitates prompt communication.

In addition to the patient calling feature, the D300 software allows messages to be created, stored and displayed easily, informing waiting patients if a doctor is running late along with DNA or clinic messages. On average 30 seconds is saved each time a patient is called, therefore a 4-partner practice seeing 120 patients a day will release approximately 5 clinic hours a week.

- ✓ Call direct from GP appointments list
- Attract attention with high visibility displays
- Improves patient experience
- Removes patient and staff confusion
- ✓ Delivers equality and meets DDA removal of barriers

Meeting Disability Legislation Requirements

Approximately 9 million people in the UK have a hearing impairment or deafness. This is at least 1 in 7 of your patient population. The D300 screens assist patients who may have a sight or hearing disability and helps your practice meet DDA legislation and promotes inclusiveness and equality for all.
