

Make Their Closet Glow

With Kichler Lighting Systems

Bring closets to life with Kichler 8T LED Tape and TE Series aluminum channels. This functional combination adds personalization and helpful light to closets and shelves, making it easier to tell a navy from a black or a peach from a pink.

*Soldered connections required due to moving parts.

Compatible with Kichler Standard Output (1.5W/ft) and High Output (3W/ft) LED Tape Light.

Channel Depth & Lenses

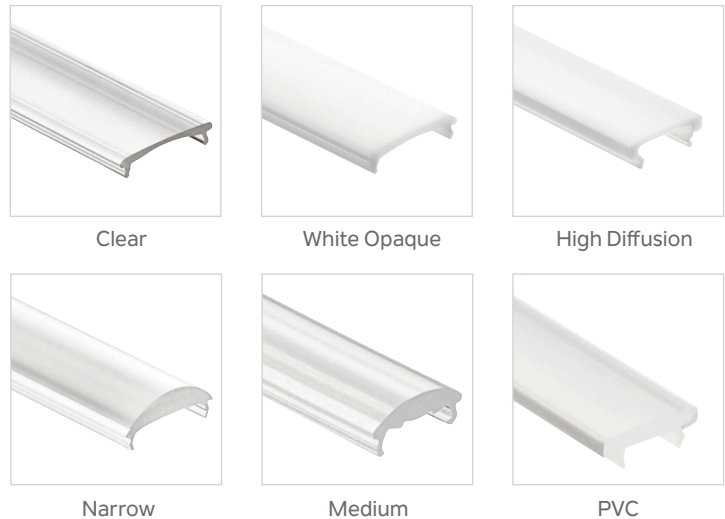

Channel Depth

- **Shallow Channel** - sleek, cost effective, presents a light distribution that's true to its source
- **Standard Channel** - common depth offers a light distribution that is gently diffused
- **Deep Channel** - allows the light to blend within the channel, resulting in a greater diffused light

Lenses

- **Clear Lens** - allows the most light through, noting that diodes will be more visible
- **White Opaque Lens** - diffuses the diodes more, as well as disperses the light output
- **Narrow and Medium Lenses** - utilized to create a thinner, more direct beam for a desired end effect.
- **High Diffusion Lens** - sits up higher, creating more of a beam angle. The added height of the lens also works to disperse more light. This lens works with Shallow and Standard surface mount channels.
- **PVC Lens** - designed specifically for the Pro Series Step Tread and In-Floor Channels. The durable material can also withstand impact and features a co-molded silicone edge – IP54 rated to combat some water, but not fully submerge.

TAPE SOLD SEPARATELY.

Standard and High Output tape products are the best complement for the TE Series channels.

Channel Accessories

Pro - Rod Mounting Collars

 <p>1TEA1RDSFBCCH Rod wall-mount collar accessory</p>	 <p>1TEA1RDSFHCCCH Rod high collar – closed-end hanging accessory</p>	 <p>1TEA1RDSFHCOCH Rod high collar – open-end hanging accessory</p>	 <p>1TEA1RDSFLCCCH Rod low collar – closed-end hanging accessory</p>	 <p>1TEA1RDSFLCOCH Rod low collar – open-end hanging accessory</p>
---	---	---	---	--

Utilize these mounting collars to affix the rod channel to a wall, or suspended from above. The open-end collars allow the rod to run through and should be set every 12" to offer support to the rod. The closed-end collars would then be used on the end of the rod. High collars measure 3" overall height and Low collars measure 2¼" overall height.

Pro - Rod Beam Adjustment

These beam adjustment accessories for the Rod channel allow you to adjust placement and direction of the tape within the channel.
