

Data Cloud Upload

<https://data-app.taus.net/upload>

Upload enables users to...

- Share translation data with other Data Cloud users
 - Uploaded data becomes searchable in [Search](#) and downloadable in [Discover & Download](#)
- Earn credits to download translation data from the repository
 - The amount of earned credits from uploads depends on the user's [membership plan](#): the pooling ratio can be 1:1 or 1:x. i.e. when users upload 1M source words they earn credits to download 1M or xM source words respectively, in any translation direction(s) and across industry domains

Types of data sets to upload

- Upload bilingual TMX and zipped files
 - In [language \(locales\) supported by the Data Cloud](#)
 - In TMX version 1.4b format
 - In UTF-8 encoding
 - Zipped (compressed) files
- Select the correct metadata from the Upload page to associate to each data set i.e. industry domain and content type.
 - If the level of granularity is not available, use an existing broader category

Quality criteria for data sets to be uploaded

- Upload copyright-owned data
- Ensure that the files to be uploaded do not include:
 - Misaligned segments
 - Omissions (i.e. missing parts in source or target)
 - Segments in other language(s) than the stated source or target languages in the TMX file
 - Machine-translated data
 - Pivoted data

See relevant FAQ: [What are the expected quality criteria for data to be uploaded to the Data Cloud?](#)

Steps to upload data sets

- In the [Upload](#) page:
 - Select attributes for industry, content type and product line
 - Select the bilingual zipped TMX file you wish to upload
 - Click on Upload button

See relevant FAQ: [Which are the steps to upload data sets to the Data Cloud?](#)

Quality checks

- A number of automatic quality checks take place prior to the upload.
 - On TMX syntax
 - On file level
 - On segments level
- In case there are issues with a file sent for upload:
 - Users are notified if they need to take an action
 - Users are notified if TAUS needs to take an action
 - If the file gets uploaded, any filtered out segments (errors or duplicates) are listed in the error report under the respective upload in the [Account History](#)

See relevant FAQ: [How is data upload quality monitored in the Data Cloud?](#)
