

# Discover insights to better manage your wireless infrastructure

Wireless infrastructure is the foundation of today's communications ecosystem. Make the most of your assets with unique and unbiased insights. Not only will you be equipped to improve your ROI, but you'll gain new understanding of the competition.

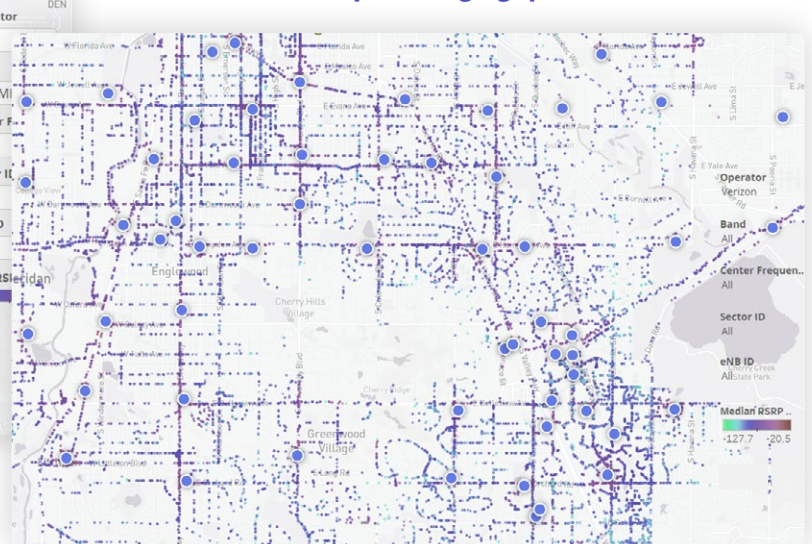

## With Aurora Insight you can:

- Accelerate infrastructure sales with identified lease-up opportunities
- Pinpoint areas where the network may be stressed, and additional or reconfigured transmitters may be needed
- Identify possibilities for new CapEx investment with visualizations of coverage gaps and rollouts of new networks
- Assess the competition with intelligence on your competitor's assets and carriers per tower

Track network buildout

## Identify coverage gaps

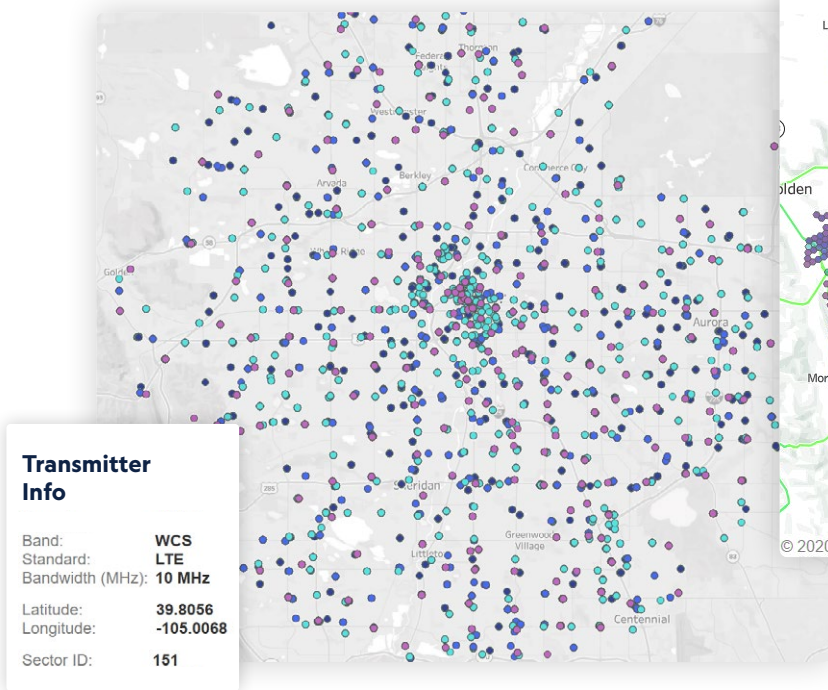

**Aurora Insight has geolocated over 7,500 sites as of April 2020.**

# We've collected trillions of measurements with insights available in a growing number of domestic and international markets. Our measurements enable:

- Transmitter locations and occupancy information, regardless of infrastructure type or network operator
  - Operator
  - eNB ID
  - Frequency band(s) deployed
  - Transmission standard (3G/WCDMA, LTE, 5G (FR1 & FR2, TF & NR))
  - Number of sectors
  - Bandwidth deployed
  - Bandwidth deployed versus licensed
  - Transmitter above ground level (AGL) height
  - Carrier collocations per tower
  - Visualization of tower mapping
- Wireless quality maps: Aggregated RSSI, RSRP, or SINR measurements in a map format can be adjusted to different resolutions

## Measure transmitter locations
