Linking Reinsurance Capabilities to the Duck Creek Platform with CedeRight

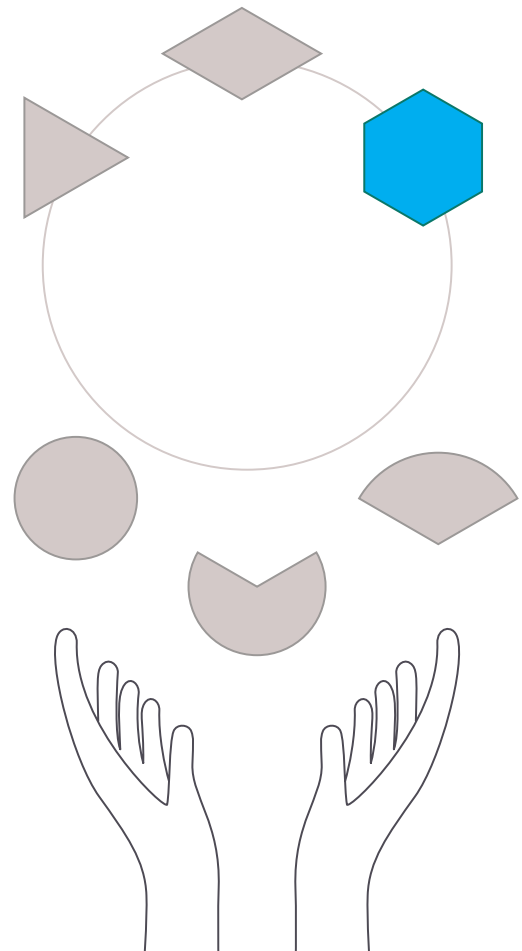

The CedeRight system allows property and casualty insurance carriers to transition from their legacy applications or manual workflows into an automated solution built on a modern technology platform. With the CedeRight application, carriers are empowered to manage complex reinsurance programs, both ceded and assumed. CedeRight handles various types of Treaties (Quota Share, Excess of Loss - CAT, Aggregate, Per Risk, and Occurrence) as well as Facultative placements. Embedded in the application is the ability to create business rules to eliminate timely and costly programming, and every keystroke in CedeRight is memorialized, creating an online full audit trail.

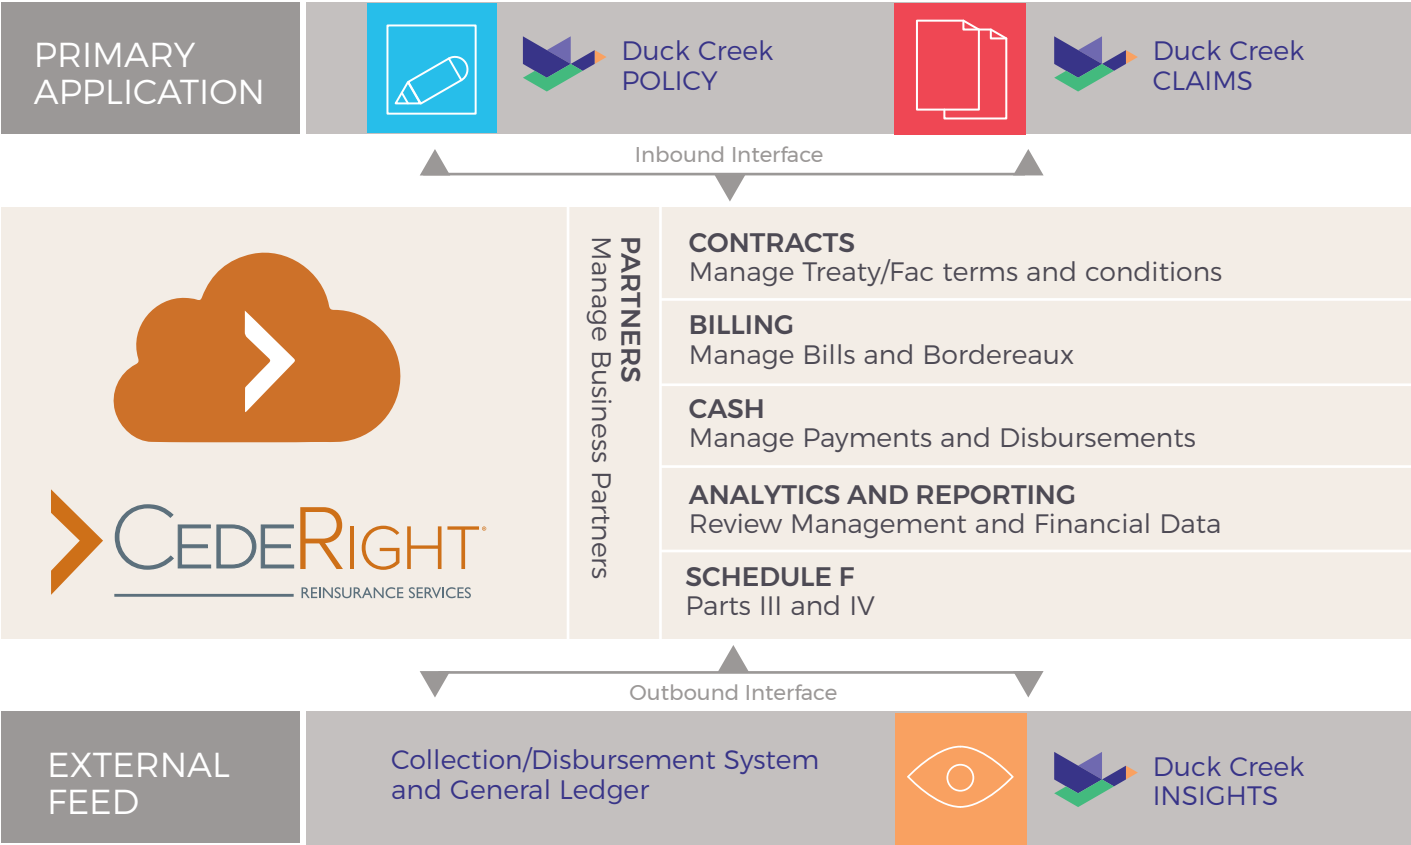

Duck Creek's highly configurable suite of products enables data flow to occur between the CedeRight application and the Duck Creek Policy, Claims, and Insights products - CedeRight runs that data against reinsurance contracts terms and conditions. To further solidify our joint offering, CedeRight's cloud delivery model and Duck Creek OnDemand, the provider's SaaS solution for the P&C insurance industry, have the ability to provide a carrier with a seamless integration workflow in a secure cloud-to-cloud environment.

Pre-implementation integration of CedeRight with the Duck Creek core insurance platform can save P&C carriers significant time during the start-up process. Carriers of all sizes can realize the financial benefits of automating and enhancing

their reinsurance billing and collections processes, as well as realize savings by gaining workflow efficiencies.

The Duck Creek Suite is user-configurable software designed to work independently or as part of a combined approach to manage all aspects of the P&C insurance lifecycle. It can be deployed on-premises or via Duck Creek OnDemand, the provider's SaaS solution for the P&C insurance industry.

Once calculations are complete, bills, notices, and bordereaux can be sent to applicable reinsurers or intermediaries within the application. CedeRight also contains cash, reporting, and analytics modules as well as export functionality to a carrier’s general ledger, data warehouse, and Schedule F package provider.

About DataCede

DataCede leads the way in reinsurance administration management with CedeRight, the choice for the P&C marketplace. Built on a modern technology platform, CedeRight is a powerful, yet very flexible, cloud delivered system which allows users to effectively manage their ceded and assumed reinsurance and have the capability to leverage the full functionality modules to automate reinsurance processing and related activities. Leveraging DataCede’s focus on the user experience, the CedeRight application is easy to use, navigate and learn. For more information visit www.datacede.com.

About Duck Creek Technologies

Duck Creek Technologies paves a genuine path to the future for P&C insurance companies. Decades of insurance experience underpin advanced technologies specifically designed to accommodate change—allowing carriers to navigate uncertainty and capture market opportunities faster than their competitors. Duck Creek solutions are available standalone or as a full suite. All are cloud-ready. For more information, visit www.duckcreek.com.
