

DeLaRue

ISO 14298 and INTERGRAF Certification

ISO 14298 is aimed at security printers, hologram manufacturers and producers of documents of value which are physically protected against counterfeiting by added security features, e.g. banknotes, ID cards, passports, driving licenses, postage and tax stamps, holograms, certificates, etc.

Based on international standards, Intergraf has developed tailor-made specifications for security printers and their suppliers for more than 15 years.

The European Federation for print, Intergraf, has developed the Intergraf Certification Requirements (ICR) and the Implementation Guidelines for the specific needs of the security printing industry, and this has been embraced by De La Rue across the business environment. Intergraf is recognised as the 'gold standard' for both the security printer and customer.

De La Rue is very proud to be vertically integrated within its ISO 14298 and Intergraf Certification; all finished product manufacturing sites are now certified to Central Bank (CB) level. The highest tier of certification possible.

De La Rue is a trusted partner at the highest levels of government, central banks and commercial organisations. In no small part due to our security and risk credentials. Operating in the fundamental areas of currency and product authentication, De La Rue applies vital values to the way in which we do business and the impact this has on our customers.

Security is an intrinsic requirement of our business, as a security printer it is built into our products, our culture and is the basis of all processes. Our security is independently audited by our customers and certified by Intergraf, to the highest available standard. Both provide a high level of assurance and confidence to our current and future customers.
