

DeLaRue

The Commonwealth

De La Rue in the Commonwealth

Since its inception, the Commonwealth has been at the heart of our business and we are extremely fortunate to be as involved with this community as we are today

De La Rue delivers solutions to more than 86% of countries within the Commonwealth

Over 95% of our workforce live and work in the Commonwealth

The majority of our production facilities and 100% of our manufacturing Centres of Excellence are located in the Commonwealth

We are also active in helping to shape a better and more sustainable future by Investing in building expertise across the Commonwealth through scholarships, entrepreneurial training, start-up funding and local community support

On the following pages, you'll find a collection of our products and services working across the Commonwealth.

Fiji

Currency

Fiji is rightly proud of its natural heritage. De La Rue's award-winning series of banknotes for Fiji feature striking imagery of the country's flora and fauna, celebrating the country's biodiversity, while improved durability and our latest security features ensure the currency's security and increased circulation life. The new family includes the introduction of the country's first polymer banknote in the \$5 denomination.

Kenya

Identity

The Government of Kenya is working towards Vision 2030, a nationwide programme designed to drive a better interconnected society. As a part of this initiative and also seeking to protect national borders and citizen identities, the Department of Immigration Services recently unveiled their new ePassport solution and document with polycarbonate bio-data page. Working in a close long term partnership with De La Rue to deliver the complete solution, The Republic of Kenya will become the first member of the East African Community (EAC) to launch a fully compliant ePassport, meeting both ICAO global specifications and those set by the EAC within the region.

Malta

Identity

Malta's award winning eGovernment and complete identity management solution is delivered by NIDMS (Malta's National Identity Management System), local specialists Exigy and long term strategic partner De La Rue. At the forefront of technology and security, the island's Citizen eID card delivers multiple functionality for the Maltese national, including identification, verification, authentication and the use of digital signatures, enabling access to services, entitlement to rights and secure participation in the global economy.

Seychelles

Currency

The series of banknotes depicting the unique wildlife of the Seychelles demonstrates some of the best design integration and security feature collaboration work that can be seen on a note today. The cylinder-mould watermark and stunning security threads show local insects and animals — the demetalisation of the holographic foil is in the shape of a turtle. Precision engraving, complex litho workings and iridescent screens of scenic land and seascapes subsequently build together; a multitude of design disciplines working in complete unison.

Bank of Scotland

Currency

The Bank of Scotland's new £5 note pushes the boundaries of creative design by using the substrate as an integral part of the note's features. The physical windows in the polymer note marry harmoniously with the position of the building's windows on the printed design, working with the imagery on both the front and the reverse.

Guyana

Currency

2016 marked 50 years of Guyanese Independence. To celebrate this national landmark, the Bank of Guyana launched a new \$50 banknote – the first time Guyana has ever issued a note of this denomination. The design of the note, created by De La Rue, reflects the overall theme of the Independence celebrations, ‘one Guyana, one people’.

Central Bank of the Bahamas

Currency

Today's society faces the continuing threat of counterfeit. In September 2016 the Central Bank of the Bahamas issued their \$10 banknote, the first denomination of their new family. This is the first fully circulating banknote in the World with De La Rue's Active™ security thread. The thread uses highly sophisticated holographic technology to achieve an obvious colour switching effect, enabling easy identification of valid banknotes and ensuring the Bahamian currency is trusted by both its citizens and the wider World.

Rwanda

Identity

eGovernment solutions help states to create a better future and improved service delivery for their citizens. De La Rue is working with the Government of Rwanda to create and implement a multi-functional smart ID card, providing Rwandans with a trusted system for proving their identity and getting access to Government services.

Trinidad & Tobago

Identity

Voting in elections is a fundamental right for citizens in any democracy, and secure election solutions can play a key role in ensuring that citizens have confidence in the elections process. In a relationship that spans more than 25 years, De La Rue has worked closely with Trinidad & Tobago's Elections and Boundaries Commission to ensure the validity of the nation's elections, delivering security, transparency and integrity – through the provision of highly secure national ID cards, a comprehensive elections management solution and ongoing education and training schemes.

Sierra Leone

Identity

Governments around the world are embracing the opportunities of digital technology to enhance the protection of citizens' identities and improve border security. The transition to ePassport for any nation is complex but the Ebola outbreak in 2014 in Sierra Leone made this an even more challenging prospect. De La Rue devised innovative solutions which enabled them to manage key components of the delivery remotely. This was complemented by a phased approach designed in line with the country's needs. By working closely with local suppliers, De La Rue ensured the successful implementation of Sierra Leone's new ePassport system and solution.

United Kingdom

Identity

The UK passport is a universally trusted document. De La Rue provides HM Passport Office with a total service solution, delivering a cutting edge book that its holders can be proud of. This is underpinned by the complex and secure infrastructure essential to maintain the integrity of the service and the resilience of the document.

Currency

De La Rue works as the Bank of England's strategic partner through every stage of the production chain – from design to integration of security components through to the printing of the final high specification notes. Our new-design fiver upholds the heritage and global standing of the British currency and ensures inherent security. The result is a next-generation technical solution produced on polymer.

Product

Proving the legitimacy of products is a key challenge for businesses faced with ever more sophisticated counterfeiting operations. De La Rue works with Microsoft to ensure customers get the genuine product through the creation of secure label designs combining attractive visuals with state-of-the-art security features. Once a label is in circulation, we support Microsoft in tracking it around the world – helping maintain product integrity.

De La Rue, helping to keep
the Commonwealth's nations,
populations and economies secure
