

Feature Overview:

- Secure, proven technology – next generation of holography, a bright holographic thread with clear imagery and bold movement
- Intuitive and easy to explain – familiar vertical tilt verification technique
- Robust and durable – passes industry standard durability tests. Compatible with Platinum® pre-print coating paper, and post print varnish
- Level 2 functionality – machine readability and UV fluorescence optionally integrated into thread for improved security

Technical Specification:

DESIGN	Thread widths	3 – 6mm
	Window length	5 - 29mm (dependent on note height)
	Fluorescence	Yellow
	Standard designs	5 standard designs that can be customised at the customer's request
	Recommendations for corresponding paper specification	In line with standard industry guidelines, paper GSM increases to incorporate wider security threads.
MACHINE READABILITY	Machine readable?	Yes with Magform™
DURABILITY	Chemical resistance properties	This thread passes all industry standard durability tests
	Physical resistance properties	This thread passes all industry standard durability tests
