

## Sample Preparation

Our analysis begins with sample preparation customized to your unique project. It's the first step to delivering final determinations of root source, chemical composition, and more.

## Design, Test, Interpret

Gateway Analytical can work with standard gunshot residue kits, extract gunshot residue from raw samples, and analyze trace evidence including hair, paint, fibers, and general unknowns.

## Forensic Analysis

Gateway Analytical specializes in gunshot residue (GSR) analysis and forensic materials analysis services. We design our analytical approach based on the sample provided, conduct the experiments to collect data, and then interpret the results. The expert opinions we deliver -- both in the lab and in the courtroom -- are supported by our state-of-the-art, ISO-accredited lab and expert scientists.

## Technical & Legal Expertise

Many of our technical experts are not only trained as forensic scientists, but are also court qualified experts capable of providing onsite or remote testimonies.
