

When you're aiming for best-in-breed...

TRUST CRYOPORT

Cryoport offers superior temperature-controlled logistics, innovative technology and expert customer support around the world to animal health companies and breeders.

Cryoport can ship your materials at a variety of temperatures from -150°C to 40°C. When shipping cryogenically, our dry vapor liquid nitrogen shippers maintain temperatures at -150°C for up to 10 days to help mitigate risks and ensure the security and integrity of vaccines, biologics, semen, embryos and other animal health materials. When shipping at temperatures other than cryogenic, we have a variety of packaging solutions to accommodate the transportation of your materials. Cryoport's shippers also feature built-in locking capabilities in compliance with EU import and export standards. Our Cryoport™ logistics management system is integrated with our SmartPak II™ condition monitoring system to allow your shipment to be monitored throughout transit and provide your team with nonstop access to data about its location, temperature, orientation and much more.

When your shipments require the best in temperature-controlled logistics, you can have confidence that Cryoport will get them where they need to be.

WHY CHOOSE CRYOPORT FOR YOUR COLD CHAIN LOGISTICS

End-to-End Solutions

From point of origin to destination, Cryoport provides easy storage, ordering, fulfillment, shipping, continuous tracking and monitoring, documentation assistance and 24/7 customer support for your cold chain logistics needs.

Intelligent Logistics

Integrated global storage, monitoring and shipping made simple. Monitoring and shipping temperature-sensitive materials around the world has never been easier.

Complete Compliance

No matter what you're shipping or where it's going, have confidence that your materials are being stored and shipped ethically and in full compliance with all applicable regulations. Cryoport's team of experts will guide you through customs and can manage all documentation.

Steadfast Protection

Navigate global cold chain logistics with scientifically enhanced Cryoport Express® liquid nitrogen dry vapor dewars, which maintain -150°C for up to 10 days, and dedicated 24/7 expert care.

Nonstop Monitoring

Complete visibility with the Cryoport™ logistics management system and SmartPak II™ condition monitoring system. Never lose sight of your sample or shipment with round-the-clock support and access to accurate and up-to-the-minute data in a single data stream.

Risk Mitigation

Your choice of a logistics partner impacts your materials, your data, your operations and, most importantly, your outcome. Our solutions are built to maintain the integrity of your materials and data throughout transit with fully validated Cryoport Express® dry vapor shippers and a team of experts who proactively monitor, support and find solutions for any potential challenges.

When your livelihood relies on the health of your herd,

TRUST CRYOPORT

ABOUT CRYOPORT

Cryoport is the premier provider of cold chain logistics solutions to the life sciences industry through our purpose-built proprietary packaging, information technology and specialized cold chain logistics expertise. We provide industry-leading shipping and storage logistics solutions for biologic materials, such as immunotherapies, stem cells, CAR T-cells and reproductive cells, for biopharmaceutical, IVF and animal health organizations around the world.
