

When you need confidence in your cold chain...

TRUST CRYOPORT

Your cold chain is only as strong as its weakest link, and the nature of temperature-sensitive biological materials leaves no room for error. Cryoport understands the value of the materials you're shipping and storing and is invested in helping you mitigate risk by preserving the integrity of your materials with an easy, reliable, cost-effective and environmentally friendly solution. When the future of your product, research, therapy, patients or family is on the line, you need a partner you can trust.

COLD CHAIN SHIPPING AND TRACKING

From point of origin to destination, Cryoport provides easy ordering, fulfillment, shipping, continuous tracking ("chain of custody") and monitoring ("chain of condition"), documentation assistance and 24/7 customer support for your cold chain logistics needs. Whether you need to move a single sample or an entire lab across the country or an ocean, Cryoport can ship your materials safely and reliably, preventing degradation or loss of product.

STORAGE AND EQUIPMENT LEASING

In order to optimize your supply chain and manage your inventory, Cryoport offers storage and fulfillment services. We have a variety of specialized storage containers that enable us to store anywhere from five to 500,000 vials. If you prefer to store materials at your location, we install, qualify, monitor and lease storage containers (for up to 96,000 samples), minimizing your capital investment without the burden of monitoring or maintaining the equipment.

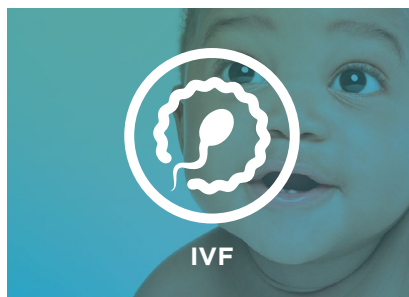

LOGISTICS CONSULTING

Cryoport's experts are well versed in all aspects of supply chain management, and we provide comprehensive logistics consulting services. Our experts offer cold chain risk assessment, lane qualification and process flow consulting to minimize your logistics risk. Consultation services also include complete supply chain optimization from the manufacturer to the patient, site assessment, staff training and software installation.

Whether you're shipping a regenerative therapy, a specimen or IVF materials, with Cryoport you'll have confidence that your materials will arrive at the destination safely and fit for administration.

When you need confidence in your cold chain, Trust Cryoport.

WHO WE SERVE

CRYOPORTAL™

Our custom-built logistics management platform, Cryoport™, provides transparency to the entire cold chain process from beginning to end with 24/7 access to your shipment location and condition. Cryoport™ condenses ordering, tracking, paperwork, customs documentation, reporting and communications into a single, streamlined interface. In addition, the power of the Cryoport™ provides significant analytics related to lane and equipment performance, freight costs and historical dewar performance in a single consolidated data stream.

SMARTPAK II™ CONDITION MONITORING SYSTEM

Throughout the shipping process for fragile biologics, it is critical that your temperature controlled shippers maintain the proper temperature and have the data to prove it. Cryoport's SmartPak II™ condition monitoring system works in conjunction with the Cryoport™ to provide you real-time information while tracking the most important attributes that impact your shipment, including location, temperature, pressure, light, orientation, humidity and shock.

CRYOPORT EXPRESS® SHIPPERS

Cryoport's liquid nitrogen dry vapor shippers are more than just containers, they are scientifically engineered logistics tools built to ensure that even the most temperature-sensitive materials can be transported and stored safely. Cryoport offers a catalog of shipping containers in a full range of sizes, enabling you to ship nearly any volume, from a single sample to an entire laboratory.

WHY CHOOSE CRYOPORT FOR YOUR COLD CHAIN LOGISTICS

End-to-End Solutions

From point of origin to destination, Cryoport provides easy storage, ordering, fulfillment, shipping, continuous tracking and monitoring, documentation assistance and 24/7 customer support for your cold chain logistics needs.

Steadfast Protection

Navigate global cold chain logistics with scientifically enhanced Cryoport Express® liquid nitrogen dry vapor dewars, which maintain -150°C for up to 10 days, and dedicated 24/7 expert care.

Intelligent Logistics

Integrated global storage, monitoring and shipping made simple. Monitoring and shipping temperature-sensitive materials around the world has never been easier.

Nonstop Monitoring

Complete visibility with the Cryoport™ logistics management system and SmartPak II™ condition monitoring system. Never lose sight of your sample or shipment with round-the-clock support and access to accurate and up-to-the-minute data in a single data stream.

Complete Compliance

No matter what you're shipping or where it's going, have confidence that your materials are being stored and shipped ethically and in full compliance with all applicable regulations. Cryoport's team of experts will guide you through customs and can manage all documentation.

Risk Mitigation

Your choice of a logistics partner impacts your materials, your data, your operations and, most importantly, your outcome. Our solutions are built to maintain the integrity of your materials and data throughout transit with fully validated Cryoport Express® dry vapor shippers and a team of experts who proactively monitor, support and find solutions for any potential challenges.

When deadlines can't be missed, when cargo is too precious
and when you need certainty in your storage and shipment,
