

Identity Manager 4.7 Administration

Course Number	Course Duration	Course Level
3167	4 Days	Beginner

The purpose of this course is to enable administrators to perform basic administrative tasks using Identity Manager 4.7. The course provides instruction and hands-on experience with tasks such as installing the NetIQ Identity Manager Engine and drivers, eDirectory rights, and drivers, and administering Identity Manager

In addition, students learn how to use analyzer, manage policies and filters, use DSTrace to track driver content flow, and implement Identity Manager password synchronization.

Audience Summary

This course is designed for students who are new to Identity Manager and need fundamental training in the basics of administering Identity Manager.
