

AWS Workshop: Scaling Windows

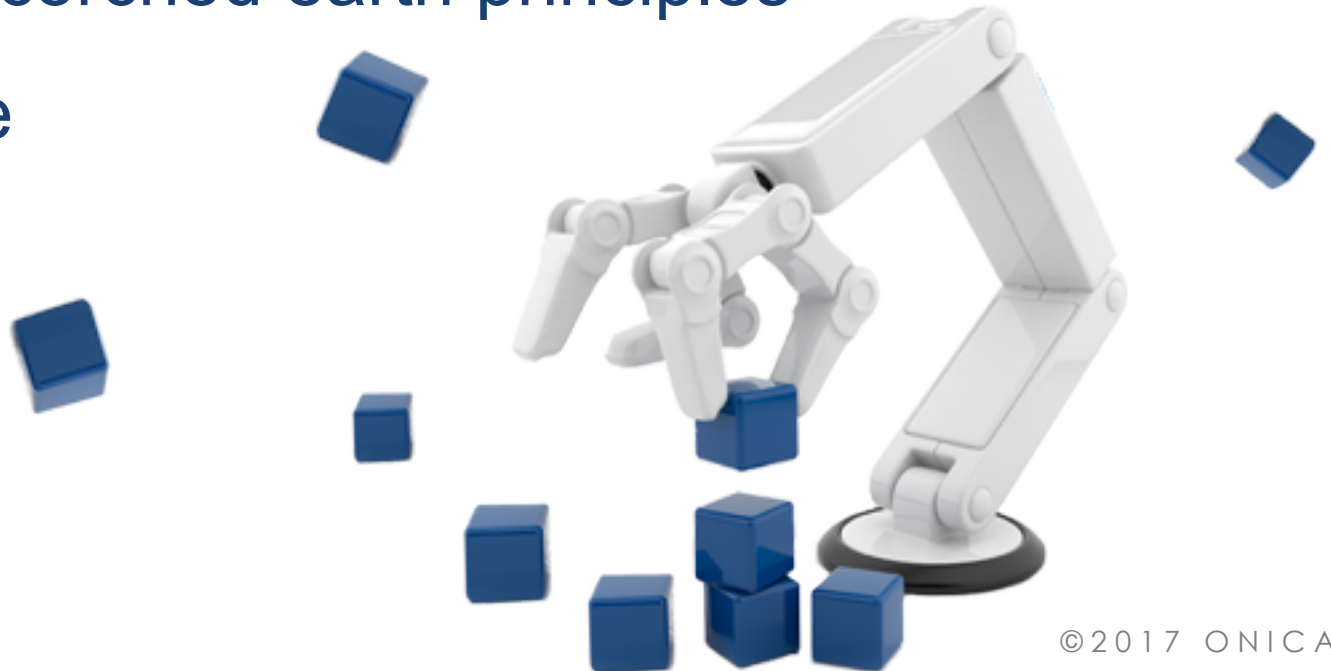

Kevin Epstein | Head of Solutions Architects

Why Automate?

- We all have to do more with less
- Consistently deliver stable, predictable environments
- Increase number of deployments, decrease time between deployments
- Deliver more secure environments
- Innovate faster

- Automated end to end
- Automate “operating code” and “pushing code”
- Automate testing – don’t accept manual testing if at all possible
- Deployments should follow scorched earth principles
- Keep it as simple as possible
- Instrument everything
- Avoid remote access
- Start simple, and iterate

Legacy Security Models AD Dependencies

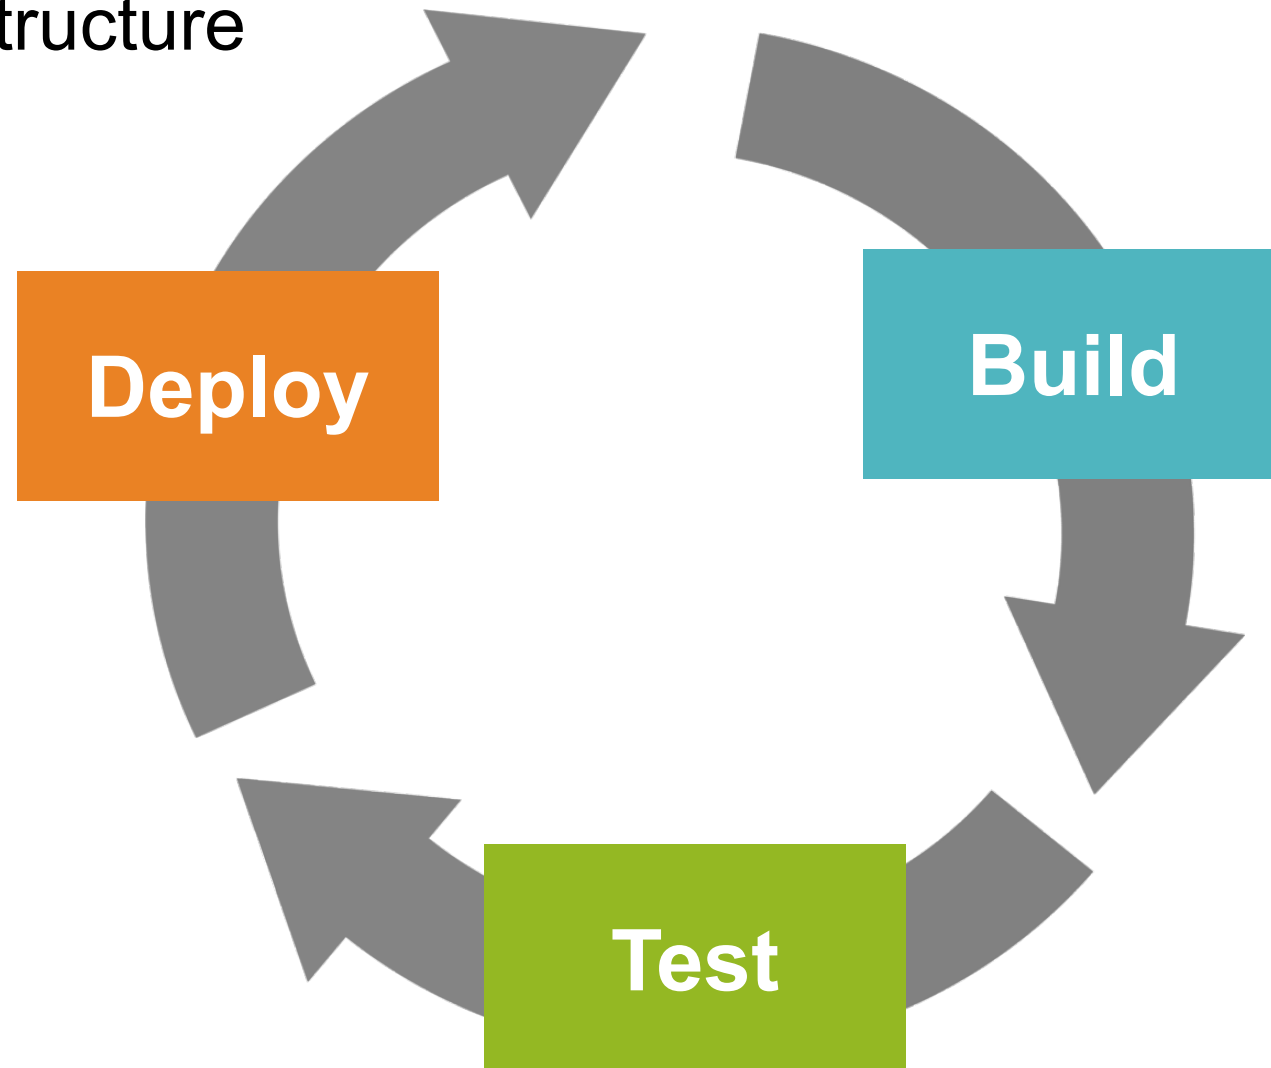

Reboots are a pain

Typically heavy software packages

We can bootstrap, to a point

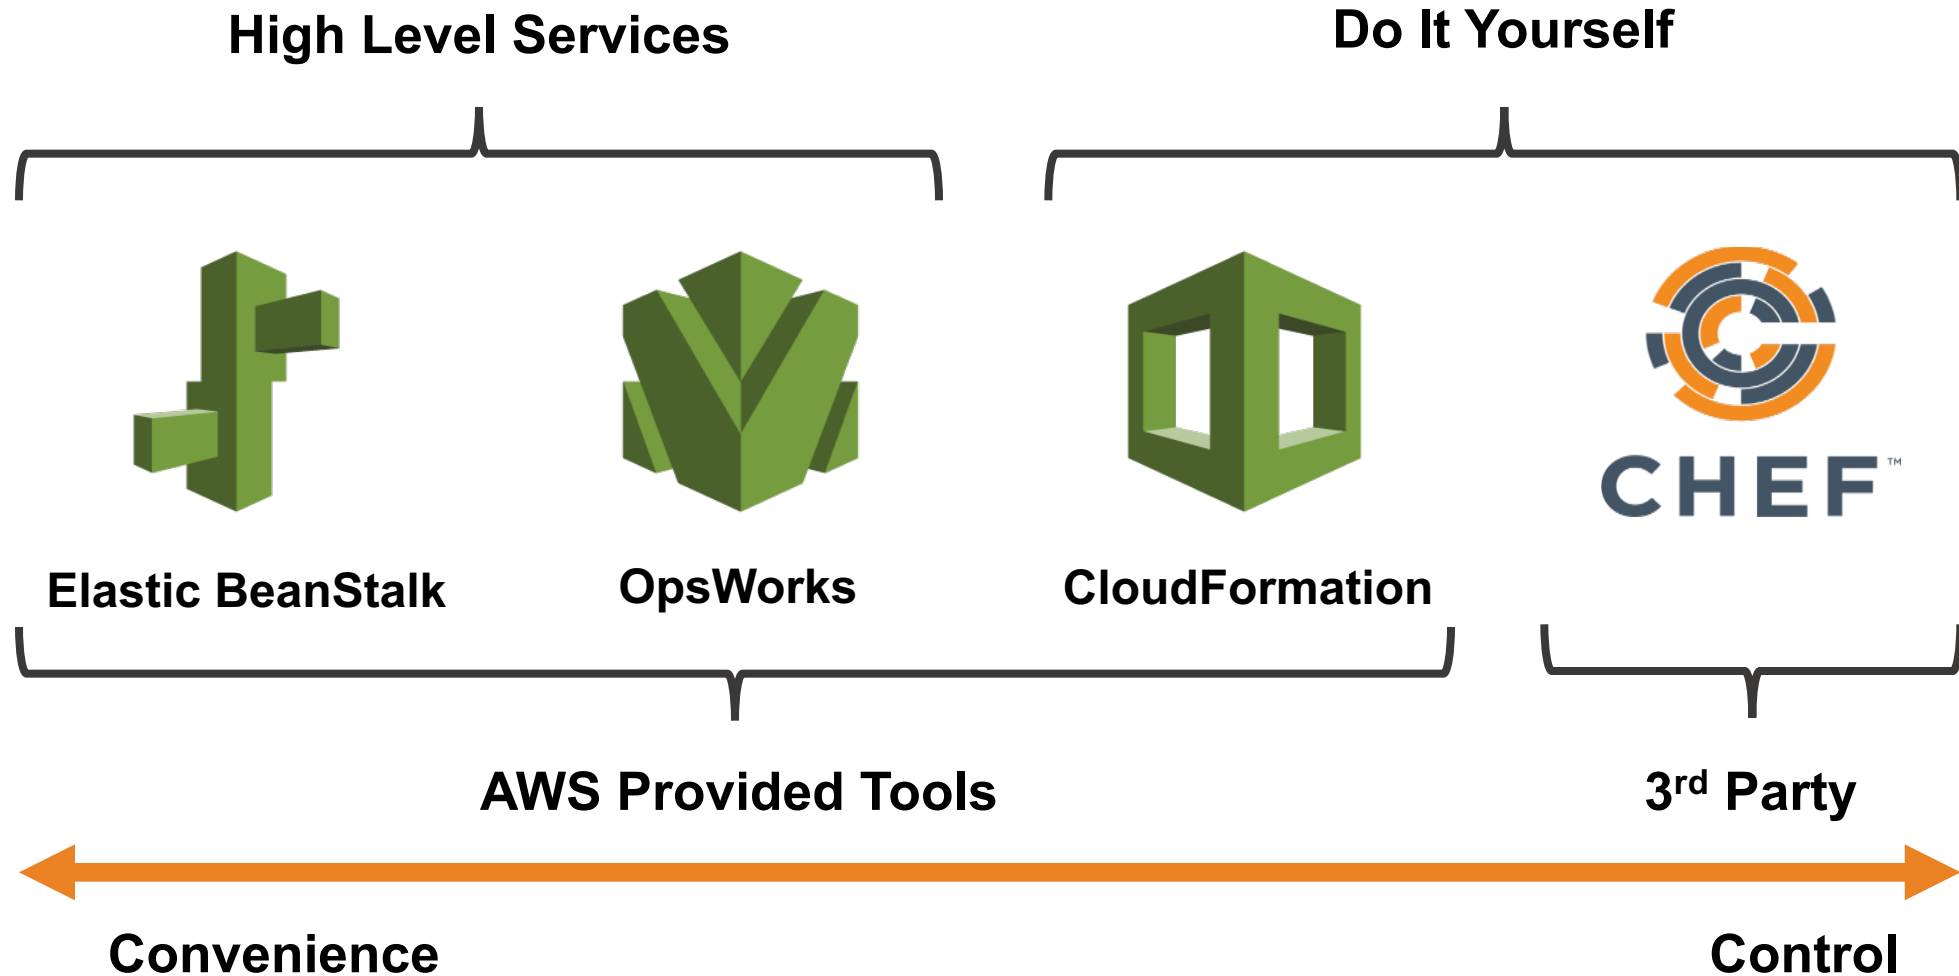

DevOps Processes

Think of infrastructure
as code

Then follow a well
defined pattern

Decide between Control and Convenience

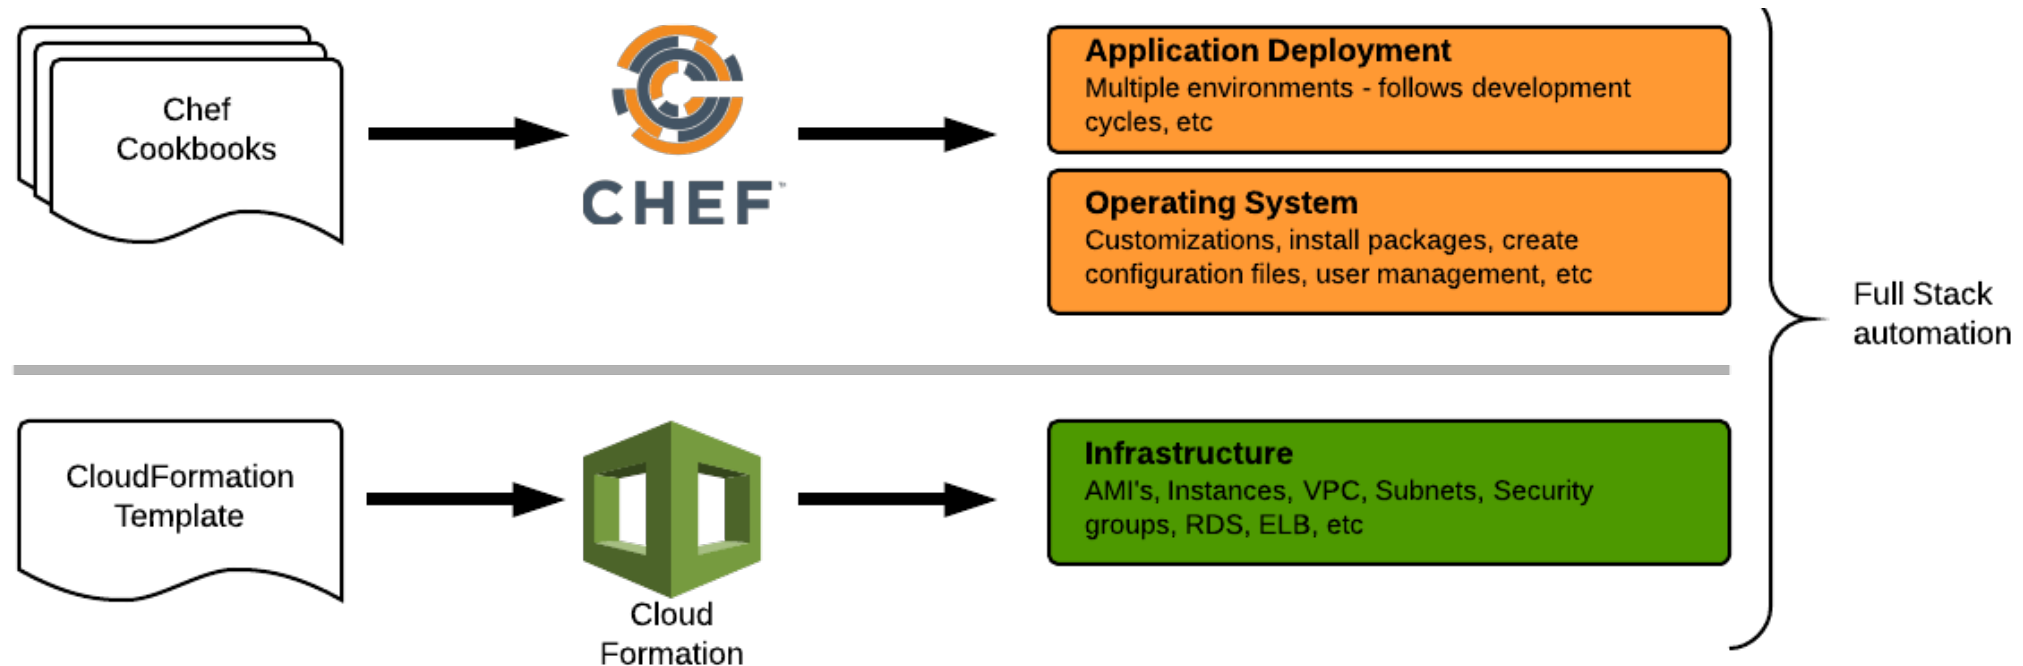

Bake vs Bootstrapping AMI's

Preconfiguring an AMI is known as baking the AMI. Baking can speed up time to starting a new instance, but the AMI could become dated quickly. Bootstrapping with Chef gives more flexibility. Virtusa is rich in experience helping customers find the right blend of automation. Use CI & CD methodologies to automate AMI creation and updating.

- **For shorter to time to deployment pre-bake as much as possible**
- **For a more automated (but potentially slower) deployment pre-bake and then bootstrap the rest**

Automation with Chef

- Infrastructure expressed as code (Chef Cookbooks & CF Templates)
- Infrastructure is easily repeatable
- Version Control your Infrastructure
- No more tribal knowledge stuck in some SysAdmin's head
- OpsWorks leverages Chef cookbooks.
- Chef is “platform agnostic”, use it in private data centers on physical or virtual infrastructure or on any cloud platform

Tools

You've probably already heard of the most common tools

PowerShell is central to all these tools

AWS Specific Tools

AWS OpsWorks

- Works with Windows (since 5/15)
- Reuse your Chef cookbooks!

EC2 Simple Systems Manager

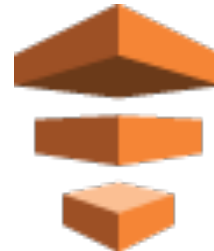

- Run Command
- SSM Config

Elastic Beanstalk

CloudFormation

CodePipeline

CodeDeploy

A stack is a set of layers, instances and related AWS resources whose configuration you want to manage together.

Add stack

Which type of stack do you want to create?

Sample stack

Explore AWS OpsWorks with a sample Node.js app

Chef 12 stack

Bring your own cookbooks and use community cookbooks

Create a stack with Linux or Windows instances that run Chef 12

The more advanced experience. Bring your own cookbooks and use community cookbooks. isolate its internal cookbooks from yours. [Learn more.](#)

Stack name

Region

US East (N. Virginia) ▾

VPC

No VPC ▾

Default Availability Zone

us-east-1a ▾

Default operating system

☐ Linux ☒ Windows

Microsoft Windows Server 2012 R2 ▾

[Need a different OS?](#)

Deploy your Windows apps using OpsWorks

Define:

- Stacks
- Layers
- Apps

Deploy apps

EC2 Simple Systems Manager (SSM)

[Commands](#) > Run a command

Run a command

A command document includes the information about the command you want to run. Select a command document from the following list.

Command document*

AWS-ConfigureCloudWatch

Description

Export metrics and log files from your instances to Amazon CloudWatch.

Target instances*

No instances selected

Select instances

Status

Enabled

Properties

Agent based

Control Privileges via IAM

Run Command

- Windows and Linux

SSM Config (Windows only)

- Join Domain
- Run PowerShell scripts
- Update EC2Config
- Configure Windows Update
- Install Applications
- Install PowerShell Module
- Configure CloudWatch

- **Developers focus on code**
- **Beanstalk provisions the Infrastructure**
- **Blue / Green Deployments**

Environment Type

Choose the platform and type of environment to launch.

Predefined configuration:

IIS

Looking for a different platform? [Let us know.](#)

AWS Elastic Beanstalk will create an environment running IIS 8.5 on 64bit Windows Server 2012 R2 v1.1.0.

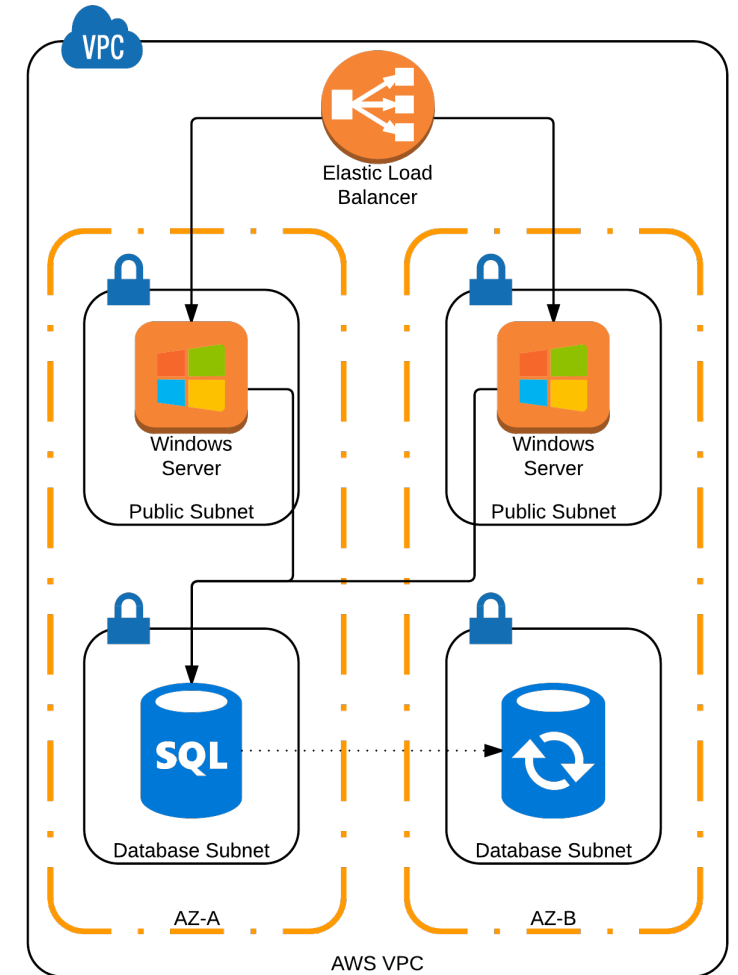

Environment type:

Load balancing, auto scaling

“

“We believe we’re moving out of the Ice Age, the Iron Age, the Industrial Age, the Information Age, to the participation age. You get on the Net and you do stuff. You IM, you blog, you take pictures, you publish, you podcast, you transact, you distance learn, you telemedicine. You are participating on the Internet, not just viewing stuff. ”

– Scott McNealy, Former CEO Sun Microsystems

SOA 12
