

Reduce Risk & Increase Collaboration Across Your Business Ecosystem with BitSight

If you are a business using third-party vendors, you need to know that you can trust them. Do their security practices (or lack thereof) pose a risk to your business? Since 2011, BitSight has been pioneering the security ratings market and providing the highest quality security and risk coverage for organizations operating around the globe. BitSight Security Ratings help companies effectively manage third- and fourth-party risk, benchmark security performance, underwrite cyber insurance policies, and assess aggregate risk.

BitSight now has high-quality data on 140,000 global organizations at users' fingertips, including an ecosystem that encompasses over 105,000 pieces of user-generated content.

BitSight invests in research and development to empower customers with objective, verifiable, and actionable security data. Additionally, BitSight uses a combination of automation and hand-validation to match IP addresses, domains and other digital assets to organizations - this unique approach provides the most comprehensive and accurate network infrastructure maps in the industry.

Reaching A Landmark

Data breaches — especially those originating from compromised third parties and vendors — are on the rise. Today, organizations need security data that clearly puts risk into business context.

140,000
