

Optimize athenaPractice with HealthCheck

Optimize athenaPractice with HealthCheck

HealthCheck is a valued service and an ideal way to optimize practice workflows and allow athenaPractice to do the heavy lifting. After all, we realize that getting the most from your investment in athenaPractice and operating your practice at peak performance is paramount.

It's the smart way to turn present-day problems into actionable solutions.

If your practice is experiencing any of the following, it's time for a athenaPractice HealthCheck:

- Your practice has new administrative, clinical or billing staff.
- It's been 2+ years since you implemented athenaPractice.
- Your athenaPractice workflows feel burdensome and clunky.
- You have concerns about your A/R and/or claims processes.
- Practice staff uses workarounds outside of athenaPractice.

The HealthCheck Process

Our HealthCheck services are customized based on your specific needs. We start with a discovery meeting to identify your concerns, and from there we offer solutions to address them.

The Quatris Healthco HealthCheck experts provide hands-on help in all things athenaPractice for both new and established users and can even shadow clinicians and staff and observe their use of athenaPractice.

When you participate in an athenaPractice HealthCheck, you receive a full evaluation that you can use to improve workflows, develop better processes, and utilize the athenaPractice tools already available to you.

A HealthCheck will ensure that you're on the way to greater automation with a cleaned-up A/R, better cash flow and your return on investment, and more efficient athenaPractice users.

With a quick call, we can help determine the best HealthCheck engagement for your practice. From a remote evaluation of your system controls to an on-site visit with follow-up consulting, our expert staff will identify problems before they become critical and help you achieve the best possible results from your reinvigorated athenaPractice.
