

# ezACCESS PATIENT PORTAL

FOR athenaPractice™

## Improve practice operational efficiency and help patients stay informed

The ezAccess Patient Portal integrates seamlessly with athenaPractice to improve efficiency and reduce costs while improving information accuracy.

**Using the ezAccess Patient Portal can help streamline health care delivery and make value-based care easier by way of communication and task automation capabilities.**

Loaded with functionality and totally configurable to your practice specifications and workflow needs, ezAccess works well for everyone - patients, physicians, administrators and staff.

**Patients** can request prescription refills, gain secure access to their health records in one easy-to-access location, communicate with the clinic staff and stay on top of their financial obligations. Patients can also receive phone, email or text messages for appointment reminders, statement updates, clinical follow-ups including lab results or drug recall notifications.

**Physicians** also benefit from ezAccess with patient look-up with full chart access, secure messaging (including attachments) and integrated flag and document workflow. Furthermore, the portal can be accessed from any web browser, is easy to navigate and it can be configured for any medical specialty.

**Administrators and office staff** benefit when patients actively use the portal. Labor-intensive activities like answering phone calls, scheduling appointments, completing paper-work and delivering lab results are streamlined. Practices may also realize reduced receivables as patients are made aware of their billing responsibilities and often pay faster. Overall operational efficiencies and increased collections in less time is achievable when ezAccess is deployed in the practice.

### Additional benefits of ezAccess include:

- Display financial policies and HIPAA notifications
- Collect key demographic and health data
- Acquire patient signatures on forms
- Automatically send physician signed documents to patients

ezAccess offers the right tools to help get your patients online
