

Do you know the 5 pillars of MRO? Do you use them?

There are 5 strong pillars needed to develop a program of MRO (Maintenance parts, repair parts, and operating supplies) and the maintenance storeroom.

The pillars are:

1. Storeroom Management
2. MRO Buying and Purchasing Management
3. Inventory Management
4. Supplier Management
5. Work Processes

Spanning the pillars like a roof is the Computer System. The foundation consists of three elements necessary to build the pillars on: management commitment, the establishment of partnerships among departments and facilities, and the management emphasis on continuous improvement, quality assurance, and team involvement. Collectively, all of these items build a structure that enables you to move forward in your Storeroom processes.

People and Processes, Inc.
