Systems

Established 1988

Technology has become an essential part of children's education and allows us to enable future-focused learning programs at schools. BES IT Systems (BES for short) focuses on working with our Education customers at a strategic level. Our passion is to utilise the best technology to help your organisation achieve the desired outcomes, and we collaborate with you to design solutions that suit your organisation's needs.

BES understands how technology is woven into the fabric of a school, university or college. Working with schools for over 23 years (as well as our relationships with global brands) enables BES to procure a bespoke solution for each customer: a balance between price and performance.

BES is a dynamic and responsive 'Complete IT Solutions' provider and we offer solutions in:

- Hardware/Software Procurement
- Managed Services
- Network Design
- Server Virtualisation and Consolidation

- Data Protection
- Network Support
- Project Management

BES incorporates a Data Centre, Managed Services Division and Corporate Sales Division and is located in a custom built property in the Springwood Business Centre (QLD).

If you have any questions or are looking for advice on an appropriate solution, please call us on (07) 3340 5555. We have a team of qualified staff members to assist you.
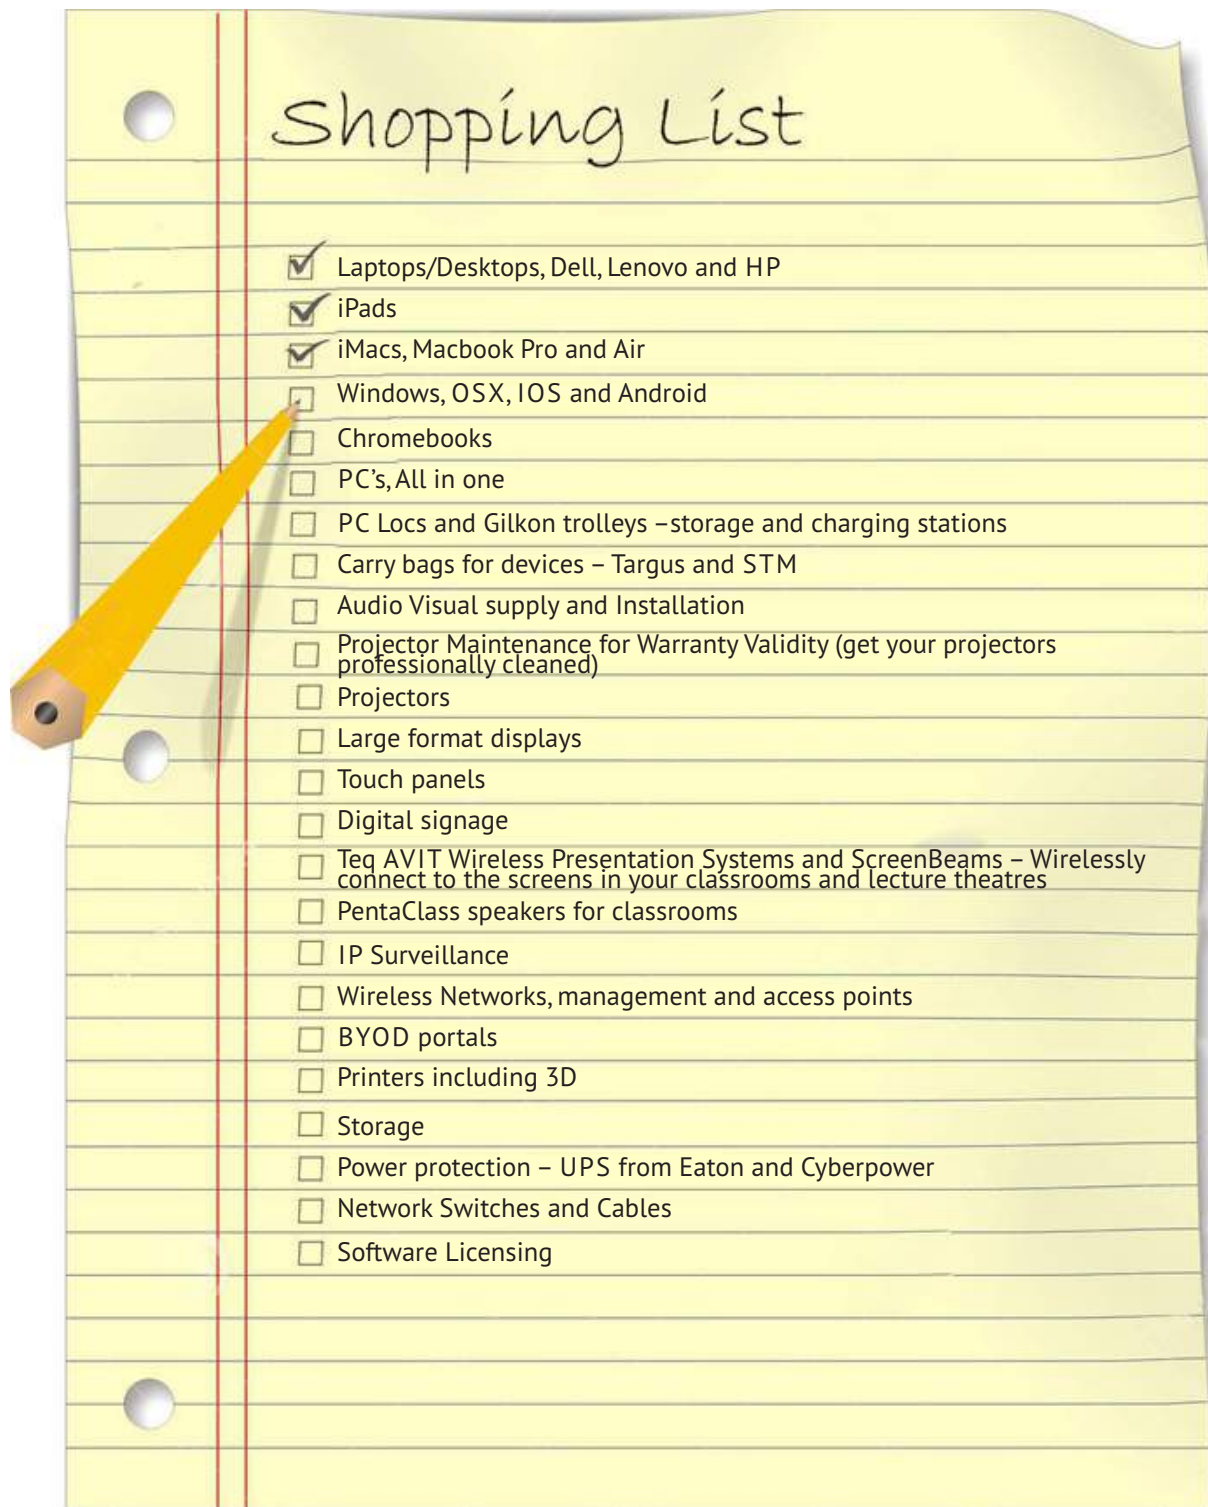

BES Professional Services

BES has a dedicated team of engineers who can help you with a range of services:

- Outsourcing and Subcontracting – hourly/daily/monthly rates available.
- Microsoft Server, Exchange, Sharepoint Installs, Configs, Upgrades and Management
- Virtualisation – Servers, Desktops
- Network Upgrades, Tuning, Maintenance
- Wireless Surveys/Planning/Tuning
- IP Surveillance, Design and Install
- Comms: Internet, VOIP, WAN

Call us on (07) 3340 5555 to find out more about our services and solutions.

BES Information Technology Systems

Established 1988

BES can help you procure everything you need for your school. After 20+ years servicing the Education sector in Queensland, we know that you might be looking for...

Shopping List

New PC Locs products are taking device management to a whole new level

PC Locs is committed to making teachers' lives easier by manufacturing high quality solutions for syncing, charging, transporting, securing and storing iPads, tablets and other mobile devices. Technology has many advantages in the classroom, but unlike textbooks, tablets have to be 'managed'. PC Locs helps solve this problem. It is world famous for its unique and innovative baskets, which keep tablets safe and reduce the time spent by teachers in distributing devices, as well as the time spent by children queuing up to put them away in a traditional cabinet style solution.

For 2016, PC Locs have launched two new and award winning products. The first, the **FUYL Tower**, is an intelligent powered locker, an exciting solution for schools where students are encouraged to bring their own devices (BYOD). Providing unique features and benefits it makes both teachers and students' lives easier as well as help schools evaluate and streamline their systems and resources.

The second, the **Joey 10 Charging Station**, allows schools to enjoy the education-focused storage solutions that PC Locs is known for, at a more entry level price. Appreciating that budget is a genuine concern for many who do not want to compromise on choosing the right cart, locker or charging station, PC Locs has developed a new cost effective and customisable product.

James Symons, CEO of PC Locs says: **"At PC Locs we recognise that not all schools are the same, and as such they require different features from their charging station. Our two new launches encompass both a solution for schools looking to implement the BYOD system and for schools looking for cost effective solutions to their tablet storage problems."**

"What is great is that for schools who simply don't have enough money in their budget to afford the full package that PC Locs offer, there is now an alternative to keep mobile devices safe, charged, and always ready for use that can be customised dependent on the school. This makes the management process so much easier for individual teachers, freeing up their time to do what they do best – teach."

The **FUYL Tower** is designed to individually store, charge and secure almost any mobile device – including tablets, laptops, mobile phones and more. Like us adults, who often go into work with our mobiles and tables only half charged, children are turning up to school with tablets that need charging. It features a power outlet and USB port in each compartment (2.4 amp USB port, 240V outlet). Through a simple and easy to use secure digital locking system, children can charge and secure their tablets until they need to use them in class.

The FUYL Tower is made up of 15 compartments that throughout a school day can service up to 100 students. Children choose a compartment and enter a four digit PIN from the digital keypad. They then insert and connect their device (USB or outlet) and close the compartment. The same four digit PIN re-opens the compartment when the student comes to collect their device later.

Where the FUYL Tower becomes unique is in what it can do 'behind the scenes'. Administrators have control and monitor the FUYL Tower remotely, where they have the opportunity to see how many locker compartments are occupied or available in real-time. If a student forgets their PIN, administrators can unlock compartments from a remote location. The FUYL Tower provides schools with a full audit trail and time-stamped events. Schools will know how often the FUYL Tower is used, when it is used and more. This intelligent data logging and statistical analysis is unique to PC Locs and will help schools to make future purchasing decisions.

The **Joey 10** is a clever table top storage unit for up to 10 tablets, which has been designed to enable schools to pay only for the features they need, with a clever 'bolt on' system.

Schools are able to transform any wall, desk or bench into a secure space for charging mobile devices. The Joey 10 Charging Station is ideal to adapt to your surroundings and fit into almost any location.

Customisable features include PC Locs' unique and innovative baskets, which keep devices safe during deployment and allows students or teacher to distribute 10 devices in a fraction of the time. This reduces the time spent deploying devices, meaning teaching can happen faster. These baskets enable the charging station to be shared by multiple classrooms or devices to be transported where charging stations can't go – like up a set of stairs.

pclocs

Carrier 10 charging station for up to 13" devices. Includes two large baskets.

BES IT Systems know you desire your AV Installation to be reliable, an asset to your school and most importantly, simple to use.

Warranty supplied by installer on work completed by them at time of installation.

Covering all stages of your project

BES do all stages of the project from start to finish:

‣ Site Assessment
‣ Project Management
‣ Installation & Commissioning
‣ Service & Maintenance
‣ Asbestos Testing
‣ Certified Tradespeople

Products and Services

‣ Data Projectors; both standard and interactive
‣ LCD & Plasma Screen Installations
‣ Interactive Learning Technologies
‣ Automation & Control
‣ Boardrooms
‣ Classrooms
‣ Lecture Theatres, Halls & Auditoriums
‣ Lighting and Lighting bars

We have a servicing schedule to suit your needs

‣ Projector filters cleaned
‣ Projector lamp hours checked and recorded in register
‣ Projectors adjusted if out of alignment with the board/screen
‣ Interactive whiteboards recalibrated
‣ Visual inspection of wall plates/connections/cables/speakers
‣ Itemised report in spreadsheet

Pricing for this servicing schedule is $40.00 ex GST per room.

Manufacturer's warranty may be voided if projectors fault due to overheating caused by clogged filters. Carrying out regular maintenance will avoid these issues.

If you are interested in the above servicing schedule or require further details please

Contact us now on 07 3340 5555.

PentaClass

hear. understand.

Enhancing Understanding - Enhancing Learning - Enhancing Life

Certes PentaClass is a classroom, auditorium and meeting room voice reinforcement system.
With multimedia system capability PentaClass delivers unparalleled acoustic performance to improve listeners understanding and reduce presenters/teachers voice fatigue.

Power of harmony
360°classroom audio system.

ONE CLASSROOM - ONE SPEAKER

Thanks to its special design, just one Certes PentaClass speaker is able to spread sound evenly in the classroom and is suitable for room sizes of up to 120m² (1291 sq ft).

+ ⟨Bluetooth⟩ +

UPGRADABLE
Upgrades are available on A and AB models

Thanks to the modular system, you can upgrade from the Certes PentaClass A to Certes PentaClass AB version (which has Bluetooth) or the full version: Certes PentaClass RUNA (which has Bluetooth and a microphone). Simply purchase the upgrade pack.

Compare Certes PentaClass models

Certes PentaClass A

$985 ex GST

Certes PentaClass A is a specially designed multimedia system for classrooms with an omnidirectional 360° soundfield.

This solution involves creating simple audio connections by using audio cables.

Certes PentaClass AB

$1254 ex GST

Certes PentaClass AB is a multimedia classroom system with omnidirectional 360° soundfield. It has been designed for both wired and wireless audio connectivity with a Bluetooth audio-ready device. Certes PentaClass AB is the perfect solution for contemporary teachers using Bluetooth - enabled devices. Certes PentaClass AB is recommended for rooms where voice amplification is unnecessary.

Certes PentaClass RUNA

$1790 ex GST

Certes PentaClass RUNA is a fully equipped omnidirectional classroom audio system.

The wireless microphone (which is designed for comfortable all day use), the Bluetooth connectivity and all the many other features allow you to experience all the benefits offered by Certes PentaClass.

All D-Link products have a Limited Lifetime Advanced Replacement Warranty

D-Link DGS-1510 Gigabit Stackable SmartPro Switches with 10G Uplinks

- 10 Gigabit Connectivity, ideal for deployment in SMB networks with large bandwidth demands such as data replication and backup, video-on-demand, and 10G server connections
- Loopback Detection automatically disables a port or VLAN when a loop is detected
- Security Features; Access Control List, D-Link Safeguard Engine, Port Security, ARP Spoofing Prevention, IP-MAC-Port Binding & DoS Attack Prevention
- Layer 3 Traffic Management, the DGS-1510 Series provides static route, allowing you to segment your network into workgroups and communicate across VLANs without degrading application performance. With these capabilities, you can boost the efficiency of your network by offloading internal traffic-handling tasks from your router and allowing it to manage external traffic and security.
- Physical Stacking up to 6 x DGG-1510 Switches, Virtual Stacking up to 32 Switches
- Automatic Voice and Surveillance VLAN's
- IPv6 ready
- Limited Lifetime Warranty with Advanced Replacement
- Very smart networking at an unbelievable price

Data Protection

Cloud Backup and Disaster Recovery

Securing reliable data backups is vital to the **business continuity** of every school, large or small. Even more important is the implementation of a disaster recovery plan to minimise delays and disruption to your business in the event of minor, major or catastrophic data loss.

BES is focussed on delivering safe, secure, and reliable offsite backup solutions for schools.

It's important to note that most data loss is caused by hardware problems, system issues and human error. Cloud backup is automated and eliminates these issues for our customers.

Benefits

Low Cost Solution
Eliminates the cost of procuring and maintaining onsite backup hardware, software and storage.

Minimise Local Admin
No technical knowledge required to manage data backup and disaster recovery.

Simplified Recovery
Restore your data in minutes, not days. Market leading software means your data is available when you need it most.

Customised Solutions
BES will design a package to suit your needs – from small business to full enterprise solutions.

Integrity And Reliability
Utilising Australia's leading backup and disaster recovery software, you can be confident your data is secure.

How it works:

▸ Automated Regular Backup. This can be hourly, daily, weekly or monthly

▸ Onsite and Offsite backups to minimise recovery time

▸ 24/7 secure access to your data

▸ Encryption to secure your data from unauthorised access

▸ Easy to implement, industry standard software for your administrator or IT Support Company to use.

Call BES IT Systems today on (07) 3340 5555 to make sure your school doesn't fall victim to data loss!
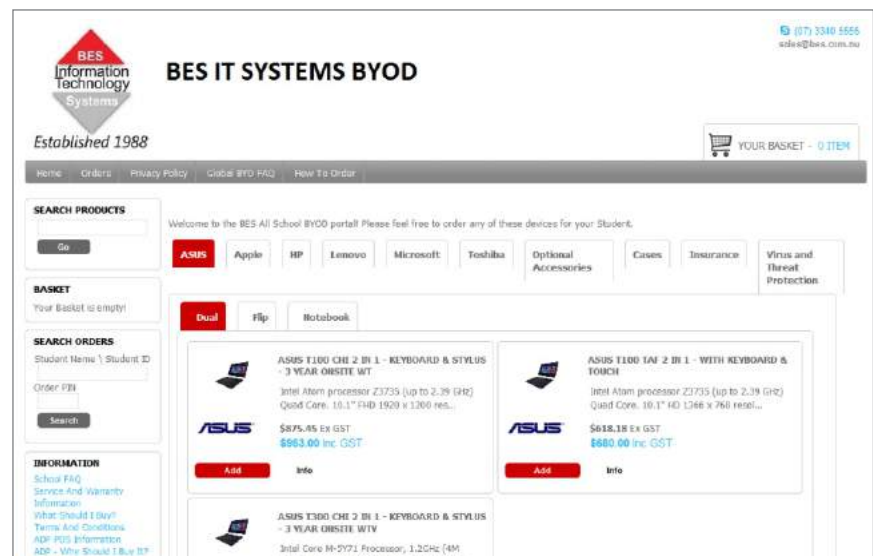

BES BYOD Portal

BYOD in schools

An increasing number of schools throughout Australia have begun to implement "Bring Your Own Device (BYOD)" schemes. BYOD can be an attractive, cost-effective way for schools to meet their computing needs.

However, allowing random devices on your network can expose your organisation to security risks and increase IT management issues. The smartest way to maximise your savings and reduce your risks is with a BYOD E-Commerce portal.

BES IT has been working with Education customers for over 23 years and has gained a deep understanding about what works in a school environment.

We have developed a **purchasing portal** where we provide a "controlled device selection" BYOD program for schools - **www.besonline.com.au/BESBYOD**

Why use BES IT Systems BYOD?

▸ Our BYOD portal is ready to go straight away with zero set up! Just send your students and parents to this site today and they can start purchasing.

▸ All products are commercial grade products and have been chosen to provide a robust and reliable performance in a learning environment.

▸ Our products come with comprehensive warranties and optional accidental damage protection to secure parent's investment.

▸ We offer a wide range of products from trusted vendors like ASUS, Apple, Lenovo and HP.

▸ We can include all necessary accessories like cases, mouses, bags and virus protection to simplify the purchase process and offer you a one-stop shop.

If you are too busy to tackle your own BYOD program, but know it's the direction you want to go, visit BES BYOD (www.besonline.com.au/BESBYOD).

Customised BYOD Portals

How does it work?

A customised BYOD E-Commerce Portal is an online store that is designed just for your school! It works just like any other online store, except that your school will decide which devices will be included. Parents can only buy from these pre-selected devices and accessories. This ensures that all devices are consistent with the schools suggested specifications set out for your students and are hardy enough for the job at hand.

Why use a Customised BYOD Portal?

▸ You choose which commercial grade products are compatible with your network and school. We can advise you which devices will be best suited for your commercial needs and budgets.

▸ The portal and availability of education pricing is an opportunity for schools to simplify the purchasing process.

▸ Minimise headaches associated with random devices connecting to your network. Avoid problems in the classroom by standardising computing devices.

▸ Unlike retail-grade products, our products come with extended warranty and parents can be assured that their investment is covered for 3 years.

▸ We can also include any accessories that students may need (extra chargers, mouses, iPad cases etc.) to offer parents a one-stop shop.

▸ A simple and clean layout with recommended warranty, ADP, case and accessories popping up during the ordering process. This makes it easy for parents to order the device and ensure they do not forget the essential extras.

▸ To make your life easy, we can provide you with customisable letters you can send out to your parent body to explain the BYOD portal, how it works and general FAQs answered.

BES IT Systems can assist you with your schools BYOD strategy and even set up a trial BYOD portal within 1 working day.

Contact us on (07) 3340 5555 today or email sales@bes.com.au to start a discussion about your BYOD portal!

Windows

Choosing devices for school?

Consider modern Windows devices for a wealth of choice to suit all learning styles.

Parents

Check whether your school has a set of recommended devices before purchasing a BYOD device. Schools may also have a preferred reseller that offers a range of useful services and warranties, in addition to the device and related accessories.

Schools

Consider the checklist when building a BYOD strategy and your list of preferred devices. Ensure that you have a wide range to suit all learning styles, age groups and budgets.

11:54

Tablet

Tablets have no physical keyboard and so are best for viewing content, using apps and playing games. Their smaller, lighter form factor means they are often used by very young students. Tablets are also a great ancillary device for older students who want to read content, conduct simple web research and play games on the move.

Laptop

Laptops or notebooks range from ultra-lightweight devices to powerful rugged devices to suit the toughest of school environments. Powerful laptops can run more demanding educational programs, and are good for students who want to write code, edit videos and create games, as well as manage their schoolwork on a single device.

Laptop with touch

Laptops with a touch screen as well as keyboard are very versatile, making them ideal for diverse student learning styles and tasks. With plenty of power for running full programs and a touch screen for visualisation and kinaesthetic learning, they are great for multimedia and visual arts students. Some laptops have the option for a pen, increasing the potential of the device further.

2-in-1 with touch and pen

2-in-1 devices are laptops where you can remove the keyboard, making them a great investment for school. With the addition of a digital pen, students can take handwritten notes, spontaneously capture and sketch out brainstorm ideas, write mathematically and input character based writing such as Chinese. The flexibility of this form factor gives students the option to study while lying on the floor or even in bed.

All-in-one

Great for school lab environments or as a shared computer at the back of a classroom. All-in-ones provide large touchscreens and a slim line modern form factor without the hassle of a bulky CPU tower. Devices range in power from entry-level through to workstation.

Microsoft

What kind of devices are suitable for school?
School device checklist

This is Microsoft's guide for schools and parents on what to look
for when recommending or choosing the right device for learning.

Essential ✔
Recommended ✔

Your device needs to handle	You need to ask for	
Different school subjects In a typical day a student might type an English assignment, jot down history notes, figure out maths equations, video a science experiment and record a speech. You'll need a device that lets them work effectively in every subject area.	**1. 10" (minimum) screen, touchscreen and keyboard** • A minimum of a 10" screen – larger for creative or technical work • A touchscreen for browsing and writing class notes • A keyboard for typing assignments	✔
Creativity, innovation and composition Students need apps like "Kids Story Builder" to create a story. But they also want cloud services like Microsoft Office 365 to collaborate and communicate from anywhere. Plus they need practice with the software that's used in the workplace using Microsoft Office.	**2. Runs both apps and programs** • Latest version Windows – apps and settings go with you across all devices • Able to run programs such as Microsoft Office, Adobe Photoshop or AutoCAD	✔
Working from different places Students need to connect to the school wireless network.	**3. Dual-band WiFi access** • Make sure it has dual-band WiFi (2.4Ghz and 5Ghz) to get the fastest access to the school network	✔
The school backpack Keep it light on their back.	**4. Lightweight** • Aim for under 1.6kg • Parents consider carefully what your individual student can carry	✔
A typical school day No one wants to run out of battery half-way through the school day.	**5. 6-hour battery life minimum** • Make sure it is capable of lasting a typical school day • Remember battery life can vary considerably with usage, so aim for higher if you can	✔
Connecting to peripherals Students need to be able to connect their device to printers, projectors, sensors, probes, thermometers and more. Plus you might need to email small files.	**6. USB port** • Needed to connect digital peripherals, such as a microscope, a printer, graphics tablet, a musical keyboard, thermometer, light meter, etc	✔
Lots of different software Make sure the device can run demanding programs for music, design, science and technology classes.	**7. Good performance** • 4GB of RAM and an Intel® Atom Quad Core or an Intel® Core™ i3 processor or above will keep programs and internet performance on track • For secondary and beyond look for Intel® Core™ i3, Core™ i5 and Core™ i7 processors	✔
Note-taking and brainstorming Students are more comfortable making notes, sketching, writing maths equations, science formulae and foreign languages with a pen.	**8. Pen** • High fidelity digitised pen with active screen is recommended for note-taking, sketching, writing maths and science equations	✔
Rough and tumble Your child will probably drop the device and may spill things on it, so it needs to be tough and protected.	**9. Durable for everyday school use** • Insist on a protective case • Look for solid state drives (SSD)	✔
Lots of files, videos, music and more Students need plenty of room for applications and their own files.	**10. Storage** • Go for at least 128GB of storage in laptops and 2-in-1s • At least 32GB of storage in tablets is recommended	✔
Improving online safety What family safety software is available/included on the device? Remember, when your child is not at school there may not be protective measures on the WiFi network.	**11. Family safety software** • Windows Defender and SmartScreen • Windows Family Settings	✔

Why CyberPower Systems – UPS Advantages

CyberPower Systems Inc. is a Global Tier 1 UPS/Power protection manufacturer with offices all over the world, with company owned manufacturing facilities and was founded in 1997 in Minneapolis USA.

CyberPower is a global leader in power protection. This is evident through our dedicated R&D personnel, unparalleled engineering excellence and UPS systems from 600vA – 200KVA, ePDU – Power Distribution Units, Surge Protection, Power Management Software Capabilities and a wide range of post-sales services.

CyberPower leads the industry with the most ENERGY STAR qualified UPS systems between 350VA-10kVA. Reduce energy usage, save money and protect the environment with ENERGY STAR products from CyberPower.

Managed Wi-Fi in Education today

Wi-Fi is arguably one of the most important components in our **modern digital learning environment.** Schools have specific Wi-Fi requirements and the infrastructure needs considered thought and planning.

Managed Wi-Fi provides a **complete, end-to-end Wi-Fi service** that frees you from the burden and cost of setting up and managing a wireless network. It can provide private Wireless LAN access for employees as well as a public Wi-Fi network for the whole school in one fully managed, end-to-end solution.

BES works with several wireless technology vendors to provide the highest grade infrastructure possible within the constraints of your budget. We are focussed on delivering secure, reliable and scalable managed Wi-Fi solutions.

Visit www.bes.com.au for detailed information about our Managed Wi-Fi service or contact us on (07) 3340 5555.
