

FLUENCE

A Siemens and AES Company

The next big thing in energy storage.

Siemens and AES have joined forces to form Fluence, a new energy storage technology and services company that combines the expertise, vision, and financial backing of the two most experienced icons in energy storage.

Fluence will accelerate energy storage technology, increase network flexibility and stability, and enable the seamless energy transformation for customers as we build the new energy network of the future.

Today, the energy storage market is fragmented and customers face the challenge of finding a trusted technology partner amidst conflicting technical claims, inexperienced vendors and installers, and new market entrants with limited power sector knowledge.

Fluence fills this major gap in the market by bringing together two of the industry's leading power and storage companies to create a new company that has the power, breadth, and footprint to continue transforming the energy landscape. The Fluence team has deployed or been awarded nearly 50 projects with a total capacity of over 475 MW.

Fluence will deliver proven, fully-integrated energy storage solutions, tailored to fit the individual customer's needs, and built upon a decade of real-world operational experience. Fluence will both deliver the Advancion® and SIESTORAGE energy storage platforms and continue to develop new storage solutions and services, reaching customers in more than 160 countries.
