

Siemens and AES have joined forces to form Fluence, a global energy storage technology solutions and services company that combines the agility of a technology company with the expertise, vision, and financial backing of two industry powerhouses.

Fluence will accelerate energy storage technology, increase network flexibility and stability, and enable the seamless energy transformation for customers as we build the new energy network of the future.

Today, the energy storage market is fragmented and customers face the challenge of finding a trusted technology partner amidst conflicting technical claims, inexperienced vendors and installers, and new market entrants with limited power sector knowledge.

Fluence fills this major gap in the market by bringing together two of the industry's leading power and storage companies to create a new company that has the power, breadth, and footprint to continue transforming the energy landscape. The Fluence team has deployed or been awarded nearly 70 projects with a total capacity of over 575 MW.

Fluence will deliver proven, fully-integrated energy storage solutions, tailored to fit the individual customer's needs, and built upon a decade of real-world operational experience. Fluence will deliver the Advancion®, Siestorage®, and SunFlex Energy Storage™ platforms and continue to develop new storage solutions and services, reaching customers in more than 160 countries.
