## 3DExperience

ENABLING MAXIMUM FLEXIBILITY IN DEPLOYMENT

The 3DEXPERIENCE® Portfolio On Premise expands capabilities already available on the V6 architecture and unifies the user experience for all Roles and Industries. Built to answer customer- and industry-specific needs for ease of use and lower training costs, the open architecture allows customization and the integration of enterprise data into a single environment. It provides a single source of truth by integrating all data required to create a powerful experience while helping reduce the necessity of costly IT operations such as database replication.

OUT OF THE BOX CAPABILITIES

- 3DSpace - Simplified, powerful management of data and content
- 3DPlay - Share 3D views and play 3D scenes
- 3DSearch - Collect and find structured and unstructured data
- 6WTags - Intelligent, structured, and fast tagging system for refining searches
- 3DMessaging - Online chat for real-time text, image, or 3D transmission
- 3DCompass - Unified access to all applications including 3rd party apps

HOW DOES CLOUD PROVIDE OPTIMAL TOTAL COST OF OWNERSHIP?

The 3DEXPERIENCE® Portfolio On Cloud expands capabilities already available on the V6 architecture and unifies the user experience for all Roles and Industries. Offered as Software-as-a-Service (SaaS) on cloud to provide increased flexibility and fast deployment, all services and support of the cloud provider are included in the price, with Dassault Systèmes as the single point of contact and provision. The cloud operates 24 hours per day, 7 days per week, 365 days per year, and includes maintenance, licensing, and upgrades. Total Cost of Ownership is improved by reducing requirements for computing and storage, as well as facility and human resources costs, empowering enterprises of all sizes, and enabling rapid sizing and capability deployment.

An intuitive single, compass-like interface provides easy-to-use navigation, search, and collaboration in the 3DEXPERIENCE platform environment, making it inclusive for all disciplines in the company – engineering, manufacturing, simulation, sales, marketing, finance, procurement, and management. Initial purchase of on cloud service includes 25 GB storage space.
