

2020 SUMMER SAFETY CATALOG

Updated 02-2020

goSafe.com

HEAT INDEX CHART - PLAN AHEAD & STAY SAFE

How To Use Heat Index

Locate today's predicted high temperature across the top line (air temp.) Down the left side (relative humidity) locate today's predicted humidity. Follow across and down to find "Apparent Temperature" or "What it feels like." Keep in mind, this chart was devised for shady, light wind conditions, so exposure to full sun can increase values by up to 15°. Strong winds, particularly with hot, dry air can be extremely hazardous.

Source: National Oceanic & Atmospheric Association & OSHA

| HEAT INDEX | RISK LEVEL | PROTECTIVE MEASURES |
|---------------------------------|------------------------|---|
| • Less than 91°F (32°C) | • Lower (Caution) | • Basic heat safety and planning |
| • 91°F to 103°F (32°C to 39°C) | • Moderate | • Implement precautions and heighten awareness |
| • 103°F to 115°F (39°C to 46°C) | • High | • Additional precautions to protect workers |
| • Greater than 115°F (46°C) | • Very High to Extreme | • Triggers even more aggressive protective measures |

Likelihood of heat disorders with prolonged exposure or strenuous activity:

Caution

Extreme Caution
