

PRODUCT OVERVIEW

BACKUP

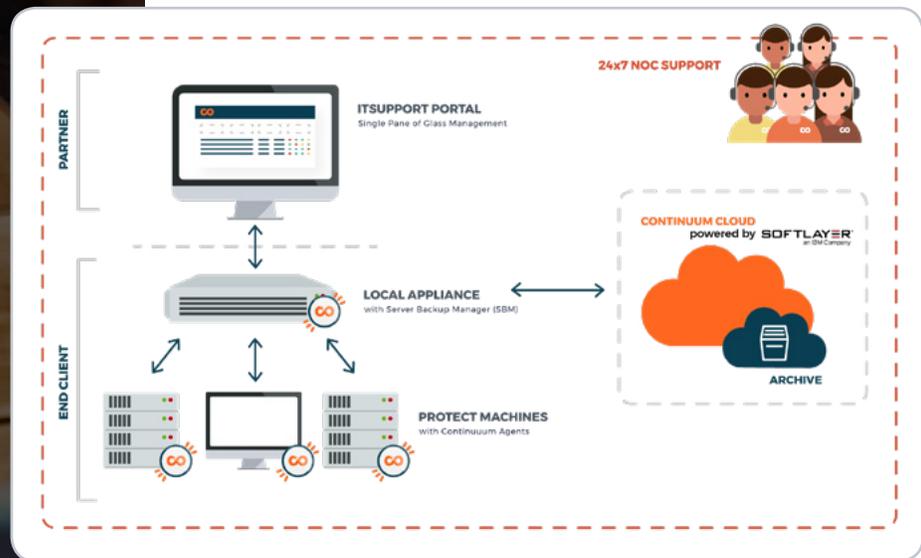

Leveraging the power and scale of the Continuum BDR platform, Backup provides a simple, cost-effective backup and restore offering designed for your small business clients. By minimizing the investment for data protection services, Backup creates a lower barrier to entry for clients with simplistic BDR requirements. And, as small businesses grow and BDR needs evolve, Backup gives you the ability to easily scale your clients' BDR deployments through a unified platform.

Key Features

- › **Continuous Data Protection™** proprietary technology that automatically tracks changes at the block-level.
- › **Comprehensive Data Verification** utilizes multiple verification processes, and tests backups to ensure validity.
- › **Offsite Virtualization** with the Continuum Cloud, built on IBM Softlayer® infrastructure.
- › **Secure Remote Access** through highly secured cloud interface.
- › **Multiple Cloud Storage Options**—from long term data archiving to immediate recovery.
- › **End-to-End Always-On Encryption** continually protects data at rest and in transit.
- › **Integrated NOC Services** for complete backup management and disaster recovery support.
- › **Local Bare-Metal Restore** for complete system recovery.
- › **Local VM Export** for easy on-site deployment and replication to VMWare or Hyper-V.
- › **Granular File & Folder Exclusion Rules** to optimize backups.
- › **Granular File & Folder Recovery and Browsing** targets only the files you want restored

Flexibility for MSPs, Business Continuity for SMBs

With the flexibility of local, cloud and hybrid options available and physical and virtual machine support, Continuum is a perfect way to deliver exceptional BDR services to meet the unique needs of any client—large or small—all from a unified platform, with remote access to every appliance for clear visibility and fast issue resolution.

Cloud Storage Plans

Fixed Cloud Storage

This plan includes the following cloud retention options:

Solo—one daily cloud recovery point

Complete—fifteen set cloud recovery points (5 daily, 3 weekly, 6 monthly, 1 yearly)

Pooled Cloud Storage

This plan includes unlimited, customizable cloud retention, with storage pooled across all other Continuum BDR sites using Pooled Cloud Storage.

Archive

This add-on offers policy-driven, long-term data storage to the public cloud or your own cloud environment using FTP, providing a cost-effective offsite archival solution for regulated clients.

Service Levels

Elite

This service level leverages the Continuum NOC to support your BDR services, decreasing your time spent managing backups by up to 90%. Your team is able to offload day-to-day management, monitoring, troubleshooting and verification of backups. Additionally, the NOC will support cloud disaster recovery and full-site DR testing.

Essential

With this service level, your team is in full control of BDR management, with baseline 24x7x365 product support.
