

COMPLIANCE TOOLKIT

OSIS

The OSIS Solution

- **OSIS Chart Checker** allows any practice to create a set of documentation validation checks to serve as a guide throughout the visit. The clinician can check at any point during the visit to see what has been documented, as well as what's left to be completed to satisfy corporate policy. This dynamic solution could be setup and tailored for any workflow (i.e. UDS, PCMH, other quality measures) whether it's using the KBM and/or custom templates.
- **OSIS Chart Checker Report** extracts data from the Chart Check system and shows in in a crystal report. Filter the data by incomplete, complete and all, within the report. This report also allows for the ability to view percentage of completion per Provider or by Section, based on the total encounters completed within the date range.
- **Compliance Reporting Package** includes 6 additional reports: Encounter with No OV Codes Report, Encounter Without Charges Report, Pending PAQ Items 72 hours or More, Lab Pending Results – PAQ Report, Pending Overdue Signoff Documents in PAQ and the OSIS Task Report (5.7 and later).

Section Name	Status	Template Name
General	Incomplete	osis bh compAssess1 ui
Demographics	Incomplete	osis bh compAssess1 ui
Presenting Problem/Current Issues	Incomplete	osis bh compAssess1 ui
Financial Community Resources	Incomplete	osis bh compAssess1 ui
Legal	Incomplete	osis bh compAssess1 ui
Present Level of Functioning	Incomplete	osis bh compAssess1 ui
