KeyWatcher Touch to safeguard Dubai Media City

Morse attends Securex in South Africa

Monthly Newsletter June 2016 Edition

Application Highlight: National Oceanography Centre in the UK

Home to some 2,500 scientists, engineers and other staff, the National Oceanography Centre (NOC) conducts research on sea level change, technology development and other fields. The NOC is also the largest facility of its kind in the UK, and it needed a better way to manage keys – while also ensuring staff safety and compliance with a range of institutional and governmental regulations.

Since turning to KeyWatcher Touch, the NOC has managed to get rid of its cumbersome manual logging and maintain strict accountability for its keys, while making it easier for security to track down keys. In fact, the Touch system has been so helpful to security that the NOC is planning to expand the system to its maintenance department.

KeyWatcher Touch to Protect Massive Media Center in Dubai

KeyWatcher Touch will soon be protecting Dubai Media City, a vast broadcast and media hub that includes some 1,300 companies spanning news, online media, advertising and more. Complementing efficient key management with a range of sophisticated tracking capabilities, the Touch has proven popular among high tech companies in the region and elsewhere.

Morse Sees Strong Turnout at Securex South Africa

The Morse team had a great showing at this year’s Securex in Midrand, South Africa. The booth prominently featured some of the latest data security and integration enhancements to KeyWatcher Touch, attracting strong interest from a range of industries.

Benefits of Key Inventory Systems’ Ergonomic Design

Posted on June 6, 2016

Good ergonomic design takes into account the interaction between a device and the individual who uses it. All around us are products that have been ergonomically designed for our comfort – remote controls, coffee pots, keyboards, office chairs and so on. [Continue reading](#)

Key Inventory Systems Support Gaming Compliance

Posted on May 17, 2016

One of the most regulated areas of any gaming facility’s physical security is the management and control of physical keys, which are used for access to all the most sensitive and highly secured areas of the casino, including counting rooms and drop boxes. By maintaining tight control of keys with sophisticated key inventory systems, casinos, poker rooms and other gaming operations can better comply with the various regulations and minimize incidents of loss and fraud.
