New product developments from ASIS

Key US army base chooses KeyWatcher

MW to help safeguard Australian consulate

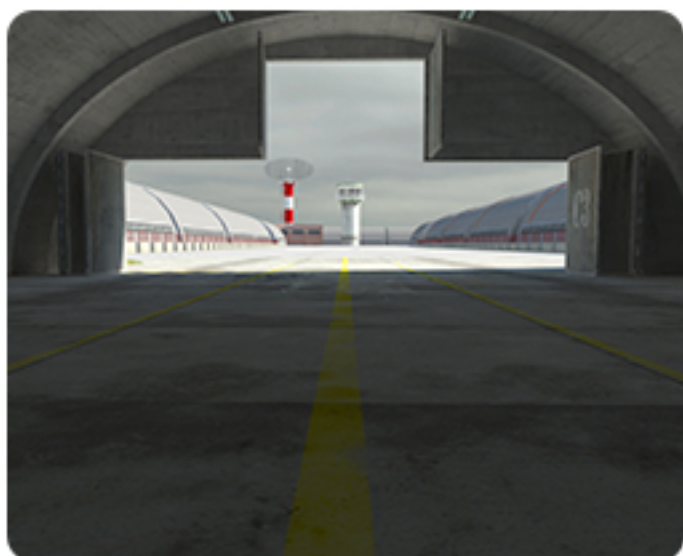

Monthly Newsletter September 2016 Edition

New Product Developments Get Warm Reception at ASIS

The team met with an outstanding number of visitors at this year’s ASIS. A big draw was the new Gen2 CPU for KeyWatcher Touch, which boasts a variety of benefits and improvements. The new Gen2 CPU and expanded memory capacity translate into improved performance, a more sensitive touchscreen and sync times that are 7–10X faster than before.

The other star attraction was our upcoming product, AssetWatcher, which uses RFID technology to protect and track a variety of assets. Designed for use in education, gaming, hospital and other high-security applications, AssetWatcher is based on the same robust and intuitive interface as KeyWatcher Touch.

Key US Military Installation Turning to KeyWatcher

KeyWatcher will soon be protecting Camp Humphreys, a US military base in South Korea. Given KeyWatcher’s robust security features, automatic tracking and reporting, and support for common access cards and other military-specific needs, the system has proven very popular with countries around the world.

MW to Help Safeguard Australian Consulate

The Australian consulate in Los Angeles is also turning to KeyWatcher, which will be used in its Century Plaza offices. As consulates must often accommodate not just staff but also a steady stream of local and international visitors, effectively tracking facility access is a must. Check out [our website](#) for more information on key control systems for government facilities.
