Security Essen 2016

Morse to protect world’s
tallest suspension bridge

Monthly Newsletter October 2016 Edition

Twitter Chooses KeyWatcher Touch

Morse will soon be securing the headquarters of Twitter. The company, which boasts more than 300 million monthly active users, will be using KeyWatcher Touch to help ensure safety and security in its San Francisco offices.

The Touch boasts a range of features that make life easier for security, and has also proven its appeal to other tech giants like Amazon and Microsoft. Instant email and SMS notifications can let management know the instant a key is overdue, and the system automatically logs all key activity, vastly simplifying the process of key tracking. (Not to mention support for a variety of access-control and other integrations!)

KeyWatcher Touch Steals the Show at Security Essen

The team had an outstanding showing at this year’s Security Essen, which saw more than a thousand companies exhibit. We’re very happy to report that the latest under-the-hood enhancements to KeyWatcher Touch got an enthusiastic response from visitors in a number of industries. As always, thanks to the whole team for your hard work!

MW to Protect Third Bosphorus Bridge

KeyWatcher will soon be helping protect the Third Bosphorus Bridge (aka the Yavuz Sultan Selim Bridge) in Istanbul, Turkey. At 322m tall (1,056 ft), the bridge is the tallest suspension bridge in the world, the second tallest bridge overall, and one of the world’s widest (almost 60m across)! It just goes to show: even the mightiest structures out there can benefit from streamlined management of keys and other assets.

Global Sales Highlights

Key Inventory Systems Support Biometrics for Enhanced Security

Posted on October 21, 2016

A number of recent articles have put forth the proposition that the password as a security measure is dead. The reasons listed are many, including how easily they are forgotten, the password is weak or easily guessed and how quickly cyber criminals can get around them. Not mentioned in these articles but posing a similar challenge is the use of PINs or smart cards as security measures. [Continue reading](#)

Protecting the Other Back Door to the Network with Key Control Systems

Posted on September 19, 2016

According to Cisco, 39 percent of IT professionals report encountering an employee accessing unauthorized areas of a company network or facility. These and other disturbing statistics regarding physical and logical security are having an impact on how organizations are protecting valuable data. [Continue reading](#)
