QUICK REFERENCE

Time Bank Implementation
- Analysis
- Design
- Configuration
- Testing and training
- Go live

Running Time Bank
- Access client-specific url
- Run Time Bank
- Review report(s)
- Import results into connecting system

Time Bank is a web-based application designed to connect multiple employee systems and provide customized data transformation functionality.

The product's template-driven integration engine combines years of application knowledge and experience with industry-standard development tools and techniques with the capability to accommodate data transfer via web services, direct database integration, XML, and various ASCII based files.

Time Bank Online is accessed via a client's browser and can include one or many "links" between employee data systems such as payroll, HR, accounting packages, or time and attendance. The minimum technical requirements are:

System Settings
Time Bank Online requires the following software:
1. Microsoft .NET Framework 4.5 (required for the ClickOnce application). Note: this is not supported on Windows XP.
2. SilverLight 5.1: The application will prompt you to load Silverlight the first time it is invoked, unless the security setup prevents it from loading. If not prompted, it will have to be loaded manually.

If your system does not have this software, please contact your IT department to get it loaded.

Supported Browsers:	Microsoft Internet Explorer v8+ Mozilla Firefox latest version
Connections:	Internet access is required to access the Time Bank application and configuration data.
