

Integrating Time with a Manufacturing Industry ERP

About Kenall Manufacturing

Founded in 1963 and headquartered in Kenosha, Wisconsin, **Kenall Manufacturing** provides innovative lighting solutions for challenging environments. Founder Ken Hawkins created the first impact and vandal-resistant lighting products, and the mission to provide durable and sustainable solutions to complex lighting problems continues today at their Kenosha manufacturing facility.

The Problem

Many clients in the **manufacturing industry** like Kenall Manufacturing use an ERP system to help manage their projects to efficiently run their business. Kenall uses **Epicor®** to keep track of products and job progress but wanted to outsource HCM functions of time and attendance, payroll and HR. Greg Page at Kenall Manufacturing needed a quick and efficient way to integrate their labor information from **Time&Attendance** with Epicor to avoid duplicate time and labor entries in both Time and Epicor.

The Solution

IDI worked with our partner to configure Time Bank to sit in between Time and Attendance and Epicor with logic to automatically extract time and labor detail and process it into Epicor. As a team, we were IDI were able to ensure that Greg receives the timecard information on a daily basis to analyze his labor costs throughout the week.

For other clients wanting to use their ERP as the source for time entry, IDI can also automate the import of employee in/out times, non-worked hours, or production information (ex: pieces/amounts) from other systems into Time&Attendance.

With **IDI**, clients benefit from integrating their preferred outsourced HCM with their existing ERP that manages their production needs and financials.

“ Our IDI integration solution is very seamless, very painless. It performs flawlessly, and I have not had an issue. Not a single problem.

Greg Page,
Kenall Manufacturing
