

Technology Audit

Silverbug offer a Technology Audit to establish what it is you're looking for and any areas of improvement. As a result, your organisation will get a good understanding on how digital transformation can benefit your employees and your business.

With many businesses across the UK experiencing aggressive growth in turnover, client base and staff, their IT infrastructure struggles to keep up with this pace. This leaves organisations in a critical position on how they choose to invest. This is where we come in!

What is a Technology Audit?

Our Modern Workplace Technology Audit is when a Silverbug expert will visit your organisation, understand what you currently have in place, the audit requirements, the business IT needs and plans for growth and understand the staff's working practices.

Based on the information you provide and our findings, our Silverbug expert will take a detailed look into your IT infrastructure and produce a RAG (Red, Amber, Green) Report demonstrating areas that are satisfactory or need improving.

Silverbug will then, discuss the possible roadmap on how to get where you want to be within your infrastructure.

The rest is in your hands!
