

COTA® WIRELESS POWER AND BATTERIES

Retrofit your small devices with real wireless power

The Cota Forever Battery™

Retrofit your small devices with Cota Forever Battery technology and take the first step toward adopting real wireless power.

- Fits within current AA battery design specs
- Frees customers from expensive batteries
- Stays automatically charged within a Cota-powered space

Eventually, all small devices will be built with wireless power. Until then, leverage wireless power in your current products with Cota.

Benefits of Wireless Power over Batteries

Real wireless power delivers energy without cords, without charging mats, and without pricey batteries. Automatically charge without maintenance or downtime with Cota.

- Save the environment from batteries' toxic chemicals
- Design small devices without concern for battery capacity
- Receive dependable, continuous power when you need it
- Save thousands per year on batteries

Cota Forever Battery:

A CES 2018 Innovation Award Honoree in the Smart Home Product Category.

*Receive power over air,
in motion, without line
of sight.*

License Cota Technology

Licensing provides manufacturers freedom to design and innovate on in-store devices and equipment while allowing Ossia to focus on technology innovations and licensee support.

Ossia does not manufacture any products that can be directly sold or resold through distributors.

Get the global standard in wireless power for your products: Cota.

Batteries Harm the Environment and Limit New Product Design and Innovation

Batteries are, by design, a flawed solution to our future of mobile, flexible, renewable energy. They have a limited shelf life, even when not in use, and are costly to make and recycle.

- Each year 350 million batteries are sold and 3 billion batteries are thrown away
- Mining toxic materials for disposable batteries can be harmful to workers and communities
- Batteries in landfills can leak toxic materials into our groundwater

Real wireless power allows designers to create without larger battery limitations and without environmental impact.

Save the environment and open doors to design and product innovation with Cota.

Redefine Wireless Power with Ossia

Ossia's Cota® technology safely delivers wireless power to devices at a distance. This patented smart antenna technology automatically keeps multiple devices charged without any user intervention and enables a truly wire-free, powered-up world.

*Cota Wireless Power:
Eliminate your reliance on disposable batteries.*

Ossia is a technology company headquartered in Bellevue, Washington.
