Improve your Secure Score without Impacting Users

"By failing to prepare, you are preparing to fail." — Benjamin Franklin

Purpose:

The Office 365 Secure Score shows how the security in your Office 365 tenant and applications stacks up against a baseline. Enabling Technologies, a Gold Partner versed in Cloud Security, has Office 365 security practitioners who can help improve your Office 365 Secure Score.

Microsoft provides suggestions to improve the Secure Score. Below the secure score, you'll see a table listing "Actions in the queue." This is a prioritized list of all the capabilities that your organization pays for that you can employ, but haven't yet.

> Check your Secure Score at www.securescore.office.com

The tool's suggestions aren't always as cut and dried as the tool will infer. For instance, while employing MFA for users is categorized as a "moderate" impact, enabling MFA without proper communication severely disrupt to productivity. The tool also omits other prudent steps, like making GlobalAdmin accounts cloud identities. Prior to taking action, admins and management should have a 360 degree view of the technical and user impact.

Process:

Since Enabling has already helped many customers decide upon and then make Office 365 security improvements, we've seen the outcomes. In a scheduled 1-4 hour discussion, we will explain works and what doesn't. We can listen to your needs and suggest improvements. We explore "what-if" scenarios and the outcomes and risks of making changes. We explain the impact and labor involved before you start taking action.

Outcomes:

When done well, security improvements balance the fine line of productivity versus risk avoidance. When you know all options and impacts, you can better set expectations to management and to the user community. Working with experts from Enabling Technologies will eliminate trial and error and provide the quickest time to an improved score, without user fallout and missteps.

To get Started:

To start improving your Secure Score journey with best practices and expert input, send an email to securecloud@enablingtechcorp.com to schedule time with a cloud security practioner.

> "Having completed our 2nd project with Enabling, their guidance, project planning, execution and support are outstanding. They are true experts and have provided invaluable services throughout our deployment."
