

# Email Compromise PhishHunter and BreachHunter

With Enabling Technologies' PhishHunter or BreachHunter, your organization can now automatically detect and remediate phishing attacks. These solutions are built on Microsoft applications like Azure Active Directory, Cloud App Security, and Advanced Threat Protection.

## Solution

- Prevention**  
Through Advanced Threat Protection.
- Detection**  
In Office 365 Cloud App Security.
- Notification**  
And auto-repair hidden issues with Threat Intelligence rules.
- Remediate**  
Through Azure Active Directory.

## Case Study

### Before

"Four teams were involved in each phishing incident, totaling ~7 hours of labor."

**Alex Kennedy**  
Director of Infrastructure & Technical Services  
Volusia County Schools

### After

"One person alerts the user and helps reset their password, totaling just 1 hour"

**Alex Kennedy**  
Director of Infrastructure & Technical Services  
Volusia County Schools

## Comparison

- PhishHunter allows you to set the rules for the automated actions. Leaving you in complete control of what is protected and how you will be notified.
- PhishHunter runs on your organization's Azure tenant.

- With BreachHunter, Enabling Technologies provides you with our team of security experts to set the rules, keep them up to date, and provide assistance with remediation.
- BreachHunter runs on Enabling Technologies' Azure tenant.
