Lexile Levels Dramatically Increase with Istation Usage

Students who use Istation (rate) see an average Lexile growth of 253 points over the course of the year.

Elementary School
in Georgia

Title-I Elementary School

Grades: 2-5

Teachers: 29

Students: 576

Summary:

After implementing Istation Reading, one school in Georgia saw a dramatic increase in Lexile growth. This increase, as well as the average amount of increase, correlates to the frequency of Istation usage.

Opportunity:

This Title I school was performing below the other schools in the county. In order to catch up to their peers as pass the Reading portion of the Georgia Milestone Assessment System, students would need to increase their Lexile score by 100 points in each consecutive grade.

Solution:

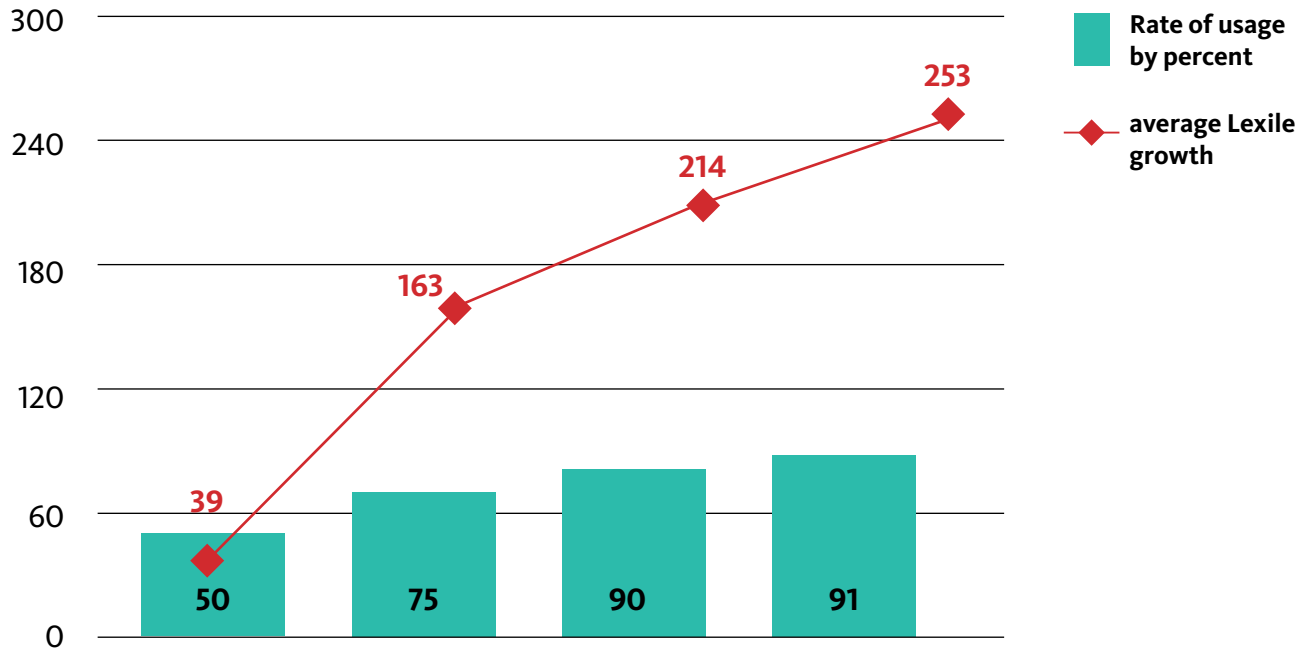

The school implemented Istation with fidelity. Students took Istation's Indicator of Progress (ISIP™) each month. Using the results of the assessments and Istation's in-depth reports, students were then placed into RTI groups. Students worked in small groups to address their needs and teachers also used Istation's teacher-directed lessons for whole-class instruction. As a final component, the school showed parents how to use the Istation Home program with their children.

Results:

Each grade saw an increase of at least 100 points, with second grade seeing the highest growth with 310 points. Furthermore, Students who used Istation the most frequently saw the highest increase in growth.
