Connected Workers Drive Industry 4.0

1 Procedures and workflows get parsed into their most fundamental elements through a simple, powerful authoring tool.

2 New procedures and workflows are deployed to any mobile device with inline text, voice, image & video features people already know how to use.

3 Workflows triggered by machines, people, and the Parsable Platform tell workers what they need to do and when they need to do it. Videos, pictures, and attached documents show how to perform each step.

4 Teams and machines collaborate by completing work steps and queuing work steps for others.

5 Real-time alerts keep an ever-watchful eye on all processes.

6 The Parsable Platform collects process data including timestamps for every action.

7 Collected data is used to compare processes, jobs, work groups, plants, and regions.

8 Users provide feedback that is combined with analysis to improve processes.

9 Improved processes and procedures are deployed.
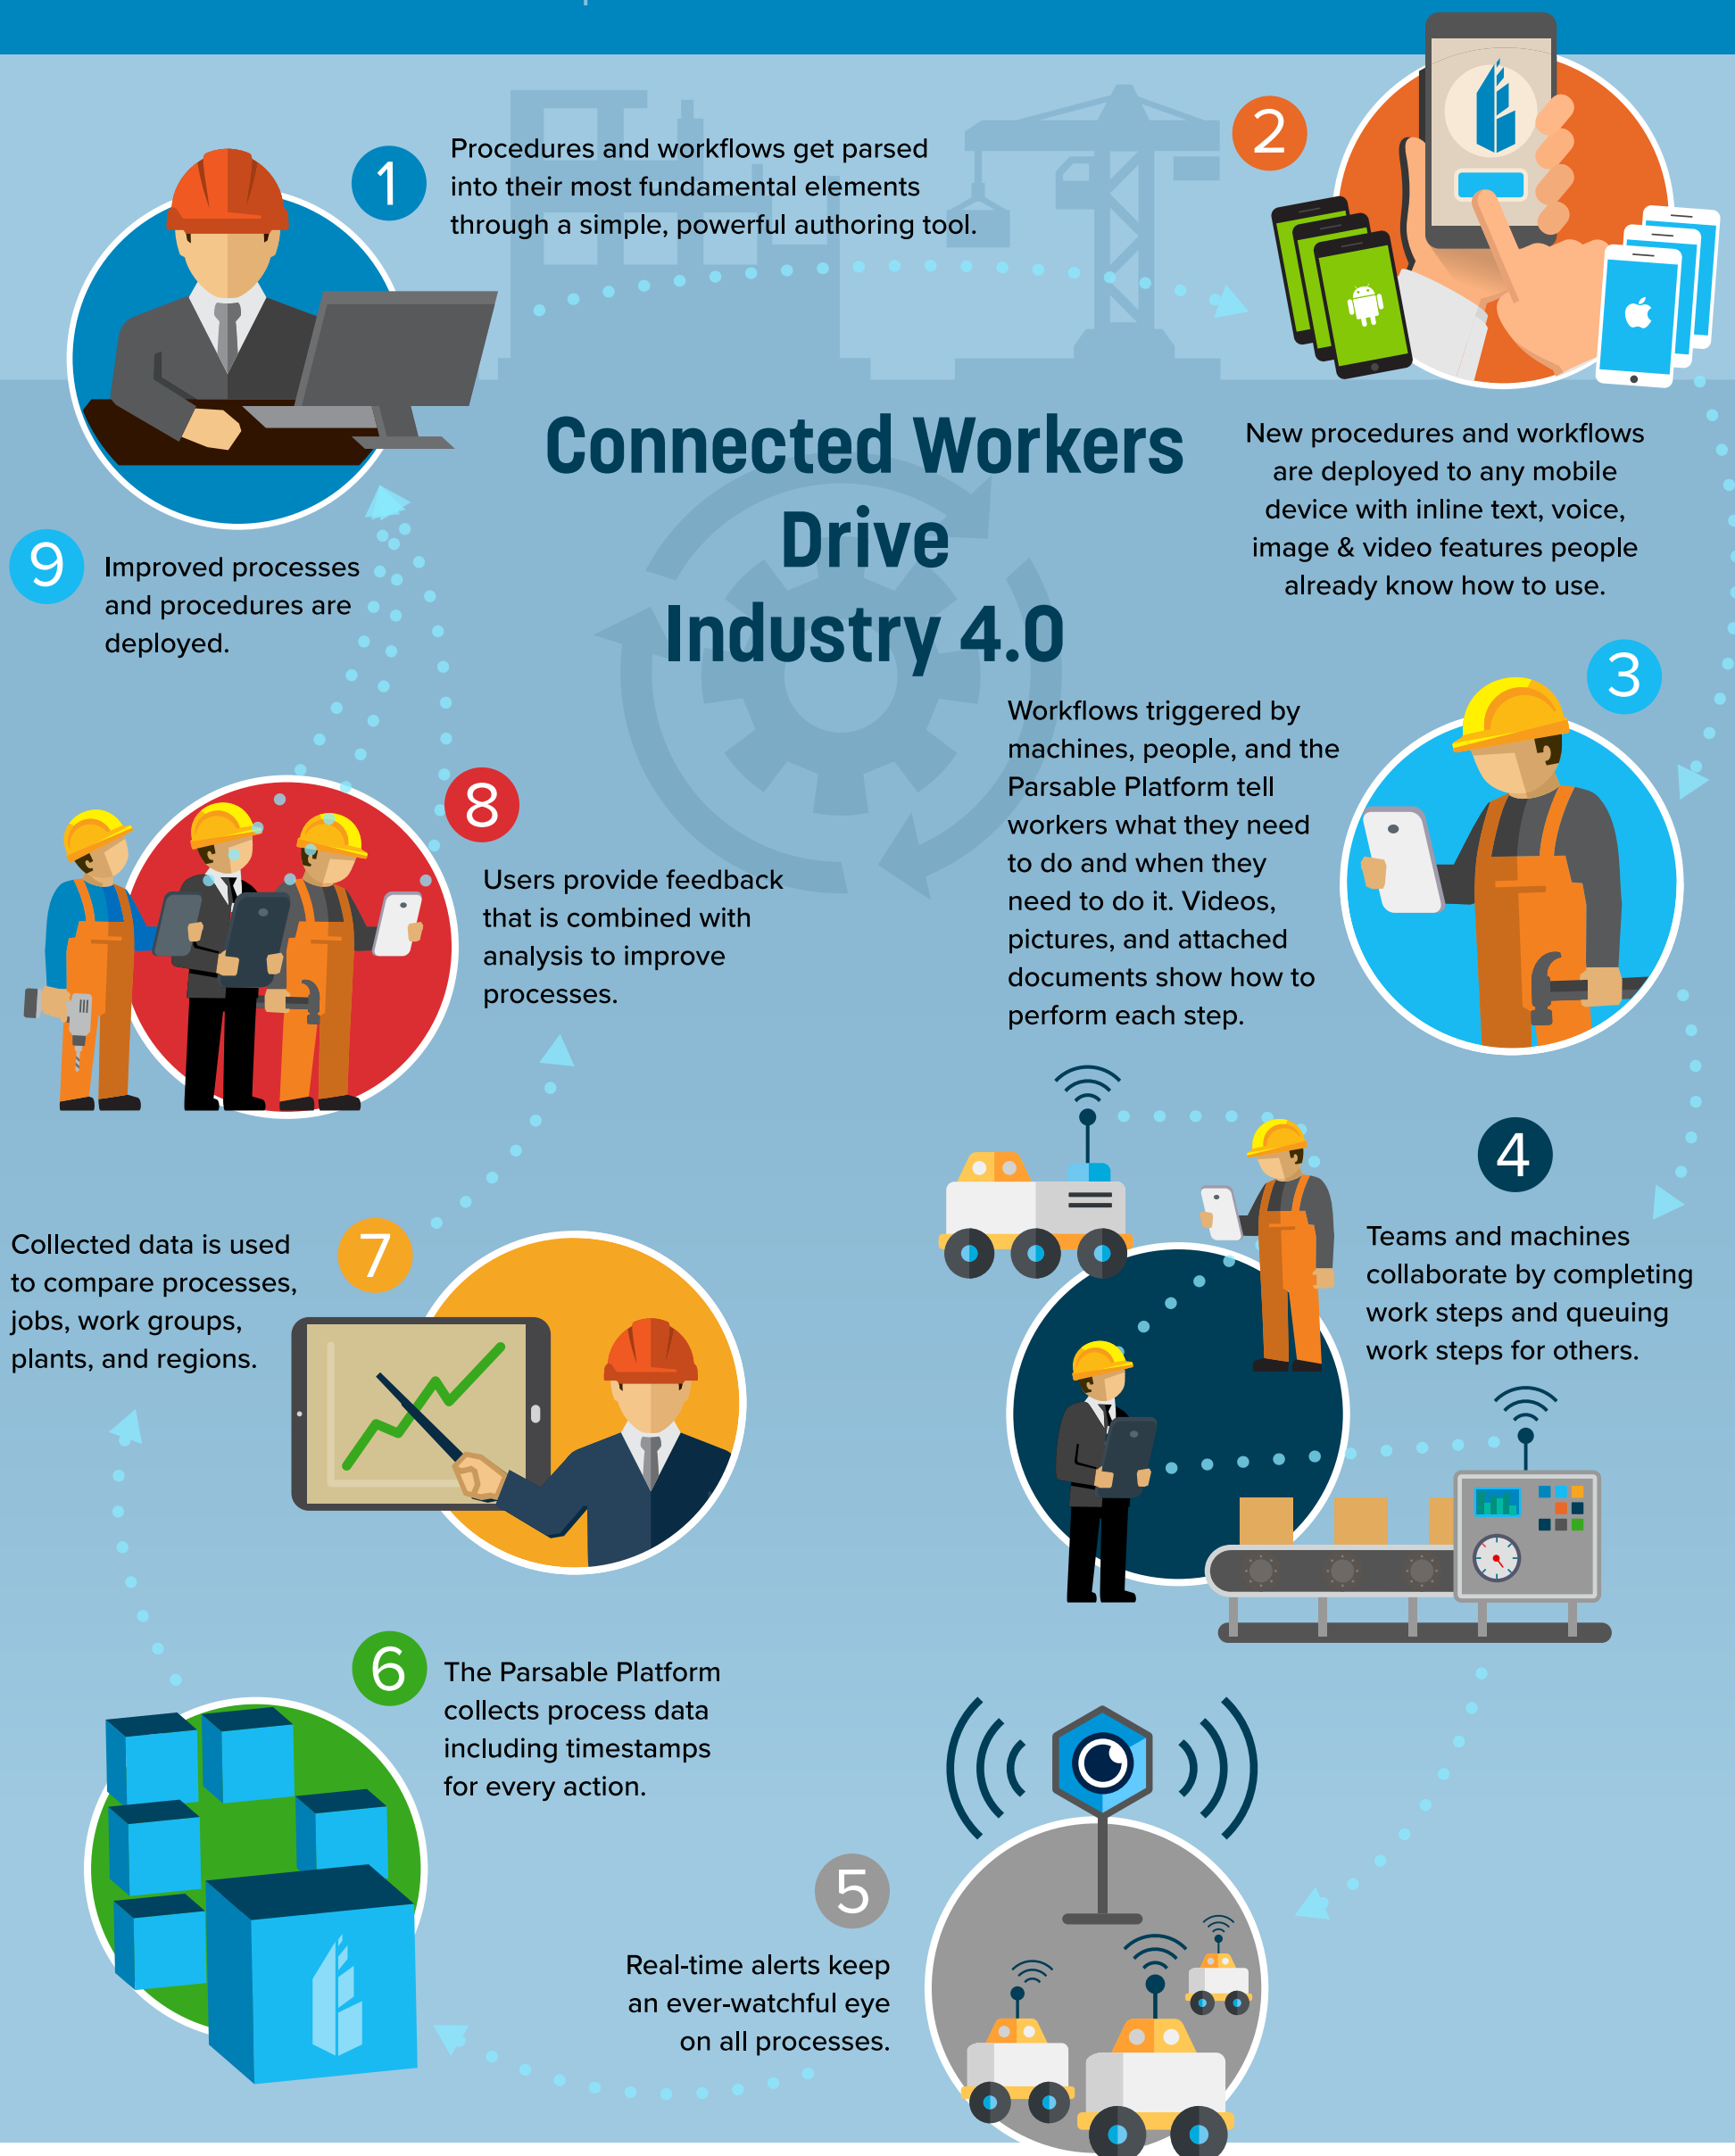

## SELECTED CUSTOMER RESULTS

85% Paperless

56% Reduction in the size of procedures

Quick Time to Value: 12 wk First Deployment, 6 wk Third Deployment

50% Decrease in Start-up, Shutdown, and Changeover Times

30,000+ New Workforce Data points to Analyze Daily

4% Increase in OEE
