

MANAGERS UNDER PRESSURE TO ABSORB LISTING COSTS ON IPO

Listed investment companies (LICs) are essentially listed equivalents of managed funds but have higher levels of transparency, tend to charge lower fees than their unlisted counterparts and are closed end funds. This means investors buy and sell the LIC vehicle so the LIC managers are not under pressure to meet redemptions. A key risk is that LICs cannot be redeemed for their underlying face value and share prices may deviate significantly from the underlying fund NTA.

This report compares 50 different LICs and identifies those that are most attractive on a number of quantitative measures including price to NTA, dividend yield, NTA growth, and total returns. The key criterion in the evaluation of a LIC is its track record. Those with the best long-term performances (measured by total return, dividends and NTA growth) are the ones that are likely to give the best future returns. In the Appendix, we provide a list of top 20 holdings and a historical price to NTA chart for most LICs.

Key Ideas:

Recent Developments:

- VGI Partners Global Investments (VG1) raised \$550m, in a concentrated portfolio of international equities, with a strong bias for capital preservation.
- Magellan Global Trust (MGG) raised \$1.55bn, via a listed investment trust, in a focussed portfolio of international equities in accordance with Magellan's global investment philosophy. Commences trading 18 October.
- Platinum launched two new quoted managed funds which feed into Platinum's unlisted managed funds. The Platinum International Fund (PIXX) and the Platinum Asia Fund (PAXX) listed on the ASX on 14 September.
- Recent IPOs have seen the manager bear the upfront listing costs, so that the net asset value of the fund will be the same as the subscription price on day one. The market has recognised the dilutionary impacts of free options issued on IPO, with an end to the practice.
- The domestic LICs which are considered **most expensive** are WAM Capital (WAM) and WAM Research (WAX). Relative to its historical average levels, Djerriwarrh (DJW) looks less expensive but still trades at an 8% premium to NTA. Other LICs that appear relatively expensive after taking into account long term NTA growth include Cadence Capital (CDM), and Mirabooka (MIR).
- **Our preferred large capitalisation domestic LICs** are Diversified United (DUI), Century Australia (CYA), Aberdeen Leaders (ALR), Australian United (AUI), WAM Leaders (WLE) and Whitefield (WHF). WLE is trading a 6.6% discount to NTA, compared with the other WAM LICs which trade at large premiums. This discount is being driven by arbitrageurs in the WLE options market, is likely to be a short term phenomenon and should unwind on options expiry 17 November 2017.
- **For exposure to the small/ mid cap growth space**, Westoz (WIC) and Perpetual Equity (PIC) are trading at discounts to NTA and have achieved strong investment returns over the year.
- Among the **International LICs**, we recommend MFF Capital Investment (MFF) and PM Capital Fund (PGF) with both generating strong NTA growth for the year, while trading at a sizeable discount to NTA. The performances of the Platinum Funds (PAI and PMC) have continued to recover over the year, with PMC trading at a 5.3% premium and PAI at 2.6% discount.
- **For high dividend yields**, we recommend the WAM LICs of WAM and WAX, as well as NCC and WIC. For sustainable yield we would recommend MLT, AUI, WLE and PIC.

WHY BUY LISTED INVESTMENT COMPANIES?

For conservative investors wishing to match or possibly beat the long-term returns of the All Ordinaries Index, especially those with a limited amount of capital, a small number of LICs can provide the necessary spread of investments. Although many investors focus on whether a LIC is trading at a discount or premium to net tangible asset backing (NTA), in reality, the better performing LICs trade at a premium and the poor performers often trade at deep discounts.

The removal of trailing commissions from unlisted mutual funds will provide a renewed focus on the listed investment funds sector. As closed end funds, the LIC managers do not have to sell stock at the bottom of bear markets to meet redemptions when prices are low and, conversely, they do not need to buy stock when prices are high. This allows a LIC to concentrate on investment selection without having to factor in the consequences of money leaving the fund unexpectedly (as in the case of a managed fund). In addition, LICs have the potential to pass on franking credits to shareholders.

Most of the better performing LICs have long-term investment horizons, which provide stability and steady returns. Management expense ratios for the larger established LICs (typically less than 0.3%) are generally much lower than those of unlisted funds. Usually this is a result of fewer transactions with long-term buy and hold strategies. LICs are also internally managed which results in lower costs. Generally, funds which focus on smaller or emerging companies tend to incur higher costs as a result of the requirement for additional in-house research. Investors should be aware that being listed means LICs cannot be redeemed for their underlying share face value and share prices may deviate significantly from the underlying NTA.

The most important criterion in the evaluation of a LIC is its track record. Those with the best long-term performances (measured by total return, dividend and NTA growth) are the ones likely to give the best future returns. However, given the lack of track record of the newer LICs, a closer focus on the stock selection process, risk management, NTA backing and the investment manager's skill are most important in making a valuation call. LICs may provide attractive income investments but clients need to be mindful that a number of LICs (eg DJW) rely on covered call strategies in order to boost dividend yields.

LICs are also able to smooth their dividends to shareholders by holding back when profits are strong. In the most recent reporting season, a large number of LICs reported lower earnings, however only a few reduced their dividends. This is due to the fact that LICs are able to payout more than they generate in profit by dipping into retained profits or dividend reserves from prior years.

Unlike managed funds, LICs provide a post-tax calculation which includes realised capital gains taxed at the corporate rate. As a result, LICs are disadvantaged as franking benefits are usually not incorporated in the performance calculations. In our report, we use pre-tax NTA figures to provide reporting consistency with unlisted managed funds.

INTERNATIONAL AND THEMATIC LICs

LICs that rely on a theme are unlikely to out-perform the market over the long term, but can provide strong returns over a short to medium term time frame. Gearing (e.g. Aberdeen Leaders has fund leverage of ~36%) is potentially a positive when markets are moving higher but can be a negative when bear markets take hold.

Templeton Global (TGG), Platinum Capital (PMC), MFF Capital Investments (MFF) (formerly, Magellan Flagship Fund), Hunter Hall Global (HHV) and the recently listed VGI Partners Global Investments (VG1) have a global spread of investments and may be appropriate for investors wishing to diversify beyond Australia. Of these, Platinum has the ability to apply derivatives to protect against loss, while VGI Partners can go long and short, with a focus on capital preservation.

For Asian market exposure, both PM Capital and Platinum offer exposure to Asian ex Japan equities via PAF and PAI, respectively.

Djerriwarrh (DJW) specialises in purchasing local option stocks and writing call options against them while Contango (CTN) mainly targets domestic microcaps.

INVESTMENT FOCUS:

Domestic – Large Cap Focus				
Code	Company	Manager	Focus	Benchmark
AFI	Australian Foundation	Internal	Large/mid cap, value, active, long only, use of options to enhance income	ASX200 Accum.
ALR	Aberdeen Leaders	Aberdeen Asset Mgt.	Large/mid cap, value, active, long only, leverage	ASX200 Accum.
AMH	AMCIL Limited	Internal	Large/mid/small, value, active, long only	ASX200 Accum.
ARG	Argo Investments	Internal	Large/mid cap, balanced, active, long only	All Ords Accum.
AUI	Australian United In	Internal	Large/mid cap, balanced, passive, long only	ASX300 Accum.

SUMMARY TABLE:

The table below provides a summary of the LICs in descending order of one year NTA growth. Note that the current pre-NTA is approximated by applying the month to date movement in the underlying Index to the previous month's NTA taking into account the underlying cash position of the fund and assuming no performance fee.

Domestic - Large Cap Focus

*The NTA is indicative only and is calculated using an interpolated month to date performance of the underlying index and the end of August NTA. Dividend yields are approximate and based on historical distributions except for CBC. NAV is used for AGF and PMC, instead of NTA;

NB: For MFF Capital Investments (MFF), a bonus issue of options (ASX Code: MFFO) was undertaken in October 2012 on a 1:3 basis to shareholders. The adjusted exercise price of the options is \$0.9964 and the expiry date is 31 October 2017. In the table above, we have adjusted the NTA for MFF to account for an approximate 6cps reduction if all the 2017 options have been exercised.

DIVIDEND YIELD

The following chart displays the LIC's approximate annual dividend yield based on the trend in dividend payments over the last year. Although dividends are an important feature of investing, clients should note that there is no guarantee these dividends will continue going forward, especially for those that reported a **drop** in dividends in FY'17 eg. CDM, ALF and CYA. Note that DJW has dropped their annual dividend from 24cps to 20cps this financial year due to a decline in dividends received and lower options income.

PREMIUM/ DISCOUNT TO NTA

The table below compares the premium/ discount of our universe of LICs to their five year historical averages. The LICs which are trading at large discounts to historical levels are DJW, ALF, MFF, WLE and ALR. The LICs that are trading at large premiums to their historical average NTA are now WAX, HHV and GVF. The strongest share price performers over the rolling quarter to date were 8EC, WAX, NCC and CTN.

TOTAL RETURN AND NTA GROWTH

Over the year to September 2017, almost half (24) of the 50 LICs we cover were able to outperform the All Ordinaries Accumulation Index (shaded in green below). This compares to 18 LICs in our last quarterly report and 12 previously. A lack of volatility in the overall market has been masked by volatility in some stocks and sectors, where funds which take a more active approach to stock selection and/or trading have benefitted. Once again, those LICs with the strongest NTA growth over the 12-month period were those exposed to international equities, although the recent rally in the A\$:US\$ would have detracted some of the gains – PMC, PAF, PAI, PGF and MFF. Meanwhile, DUI remains the best performing Australian LIC.

Over the five years to September 2017, the LICs that experienced the strongest NTA growth were MFF, WAX, TGG, PMC and CIN. Note that CIN continues to have a large holding in Event Hospitality & Entertainment (EVT) while MFF, TGG and PMC benefited from their exposure to international equities. The worst performing domestic funds over the long term include WIC, CAM, IBC and CTN. Some stability has returned to CTN after returning to a one manager LIC with Contango Asset Management being the sole manager. We expect the future performance of CTN will unlikely be reflective of its historical performance.

PREMIUM TO NTA VS NTA GROWTH

In the chart below, the most attractive LICs are the ones positioned on the lower right corner as these are trading at a significant discount to NTA despite achieving above average sector growth in NTA over the last five years. The international LICs (MFF and TGG) continue to trade at a significant discount to NTA despite a recovery in performance over the last six months. Among the domestic LICs; CIN, WHF, FSI, ALR, DUI, and AUI are attractively priced. The LICs that are currently most expensive are MIR, DJW, WAA, WAM, and WAX.

TOTAL RETURN VS NTA GROWTH

In theory, we would expect share price gains to reflect NTA growth over the long term. However, high market volatility often provides opportunities to invest when there is a disparity between total return and NTA growth. In the chart below, the LICs that lie furthest away from the line of best fit towards the lower right quadrant represent the most attractive opportunities ie. when NTA growth exceeds total return by a wide margin.

Exchange Traded Funds (ETFs)

ETFs are ASX listed, managed, open-ended funds (new units are created when you invest in the fund) that invest in a portfolio of securities, which may include Australian shares, international shares, fixed income securities, listed property trusts, commodities, currencies or a combination of asset classes. ETFs can be classed as conventional, which are backed by physical assets, or synthetic, which rely on financial instruments like derivatives. Most ETFs in Australia are conventional ETFs which track common indices.

There are two distinct type of funds; passive funds which replicate the performances of the underlying indexes, completely eliminating manager performance risk in the process, and active funds which are actively managed funds and have the same structure as an unlisted managed fund but can be bought and sold on the ASX. Yields are based on the aggregate yields of the component stocks. Management fees for passive ETFs tend to be low, in the range of 0.07 to 0.5%, while for the active funds the management fees plus the bid-offer spread are similar to the unlisted fund.

Passive index ETFs are typically used for portfolio construction and asset allocation strategies, with a low cost structure. They are usually designed to track abroad index but are becoming more commonly used in tracking a specific sector, providing a thematic overlay.

Australian Equities - Passive Index

Active strategy ETFs can be used to enhance an investors' exposure to a style of investment philosophy, however they come with a higher cost with management fees in the 0.255 to 2.05% range, but also come with manager performance risk. They can be particularly effective in enhancing yield and or beating the market using quantitative factor models (also known as strategic or smart beta).

Important Notice: Copyright 2017. The contents contained in this report are owned by Patersons Securities Limited ('Patersons') and are protected by the Copyright Act 1968 and the copyright laws of other countries. The material contained in this report may not be copied, reproduced, republished, posted, transmitted or distributed in any way without prior written permission from Patersons. Modification of the materials or use of the materials for any other purpose is a violation of the copyrights and other proprietary rights of Patersons.

Disclaimer: Patersons believes that the information or advice (including any financial product advice) contained in this report has been obtained from sources that are accurate at the time of issue, but it has not independently checked or verified that information and as such does not warrant its accuracy or reliability. Except to the extent that liability cannot be excluded, Patersons accepts no liability or responsibility for any direct or indirect loss or damage caused by any error in or omission from this report. You should make and rely on your own independent inquiries. If not specifically disclosed otherwise, investors should assume that Patersons is seeking or will seek corporate finance business from the companies disclosed in this report.

Warning: This report is intended to provide general securities advice, and does not purport to make any recommendation that any securities transaction is appropriate to your particular investment objectives, financial situation or particular needs. Prior to making any investment decision, you should assess, or seek advice from your adviser, on whether any relevant part of this report is appropriate to your individual financial circumstances and investment objectives.

Disclosure: Patersons, its director and/or employees may earn brokerage, fees, commissions and other benefits as a result of a transaction arising from any advice mentioned in this report. Patersons as principal, its directors and/or employees and their associates may hold securities in the companies the subject of this report, as at the date of publication. These interests did not influence Patersons in giving the advice contained in this report. Details of any interests may be obtained from your adviser. Patersons as principal, its directors and/or employees and their associates may trade in these securities in a manner which may be contrary to recommendations given by an authorised representative of Patersons to clients. They may sell shares the subject of a general 'Buy' recommendation, or buy shares the subject of a general 'Sell' recommendation.

Stock recommendations: Investment ratings are a function of Patersons expectation of total return (forecast price appreciation plus dividend yield) within the next 12 months. The investment ratings are Buy (expected total return of 10% or more), Hold (-10% to +10% total return) and Sell (> 10% negative total return). In addition we have a Speculative Buy rating covering higher risk stocks that may not be of investment grade due to low market capitalisation, high debt levels, or significant risks in the business model. Investment ratings are determined at the time of initiation of coverage, or a change in target price. At other times the expected total return may fall outside of these ranges because of price movements and/or volatility. Such interim deviations from specified ranges will be permitted but will become subject to review by Research Management. This Document is not to be passed on to any third party without our prior written consent.
