

2020 Arrester Webinars

MONTH	DATE/TIME	TOPIC	DESCRIPTION
February	February 11 @ 10AM	Evolution of Surge Arrester Technology	Metal Oxide Varistor, MOV, technology was introduced in 1967. Before this discovery, the surge arrester market was dominated for some time by the Silicone Carbide technology. This webinar will cover the history and evolution of surge protection.
	February 20 @ 2PM		
March	March 10 @ 10AM	Arrester Selection	Surge arresters protect a variety of equipment from the damaging effects of overvoltages. Learn the fundamentals of proper arrester selection to extend the life of critical power equipment.
	March 19 @ 2PM		
April	April 14 @ 10AM	Distribution Arrester Applications and Selection	Properly sized arresters provide the best possible protection. This webinar will focus on application, selection, and insulation coordination of overhead and underground distribution arresters.
	April 23 @ 2PM		
May	May 12 @ 10AM	Substation Arrester Application and Selection	Substation equipment demands the best possible protection from long lasting switching surges. This webinar will highlight the extensive selection process for station arresters and the importance of considering different arrester designs for both protection and safety.
	May 21 @ 2PM		
July	July 14 @ 10AM	Line Performance Improvement	Lightning induced insulator flashovers can result in momentary interruptions which pose as security and safety risks for government facilities and hospitals, as well as lost revenue for manufacturing facilities. Join this webinar to learn more about line performance improvement options, including Protecta*Lite® Systems line surge arresters.
	July 23 @ 2PM		
August	August 11 @ 10AM	Installation Tips	After correctly sizing an arrester for a given application, proper installation techniques will reinforce the surge arrester's ability to provide the best protection. This class will cover surge arrester installation tips from frequently asked customer questions to lessons learned in the field.
	August 20 @ 2PM		
October	October 13 @ 10AM	Field Testing	Field testing is becoming more common today as the demand for reliable power continues to increase. Learn about the different field tests ability to predict the arrester's end of life, and our recommendations on how to select a test method.
	October 22 @ 2PM		
November	November 10 @ 10AM	Insulation Coordination	Surge arresters are installed to reduce overvoltage stresses to critical equipment. During this webinar, you will learn insulation coordination fundamentals for calculating the margin of protection achieved with surge arrester installation.
	November 19 @ 2PM		

All webinar sessions will last 1 hour with additional time for questions.
