

MolokFestival™ installation instructions

MolokFestival is installed on an even, hard ground in a way that the filling lid faces the user. Note that the container is not suitable to be installed even partly underground.

1. Remove plastic covers that protect the container during transportation.
2. Open and straighten the lifting bag before placing it in the container. Check that the bottom of the lifting bag is closed tightly and the rope is placed according to the instructions. It is possible for the lifting bag's closing mechanism to open during delivery. If the container is divided in to two sections, check both lifting bags.
3. Place the lids, lifting bags and quick systems on their place. If the lid is not fastened to the quick system; fasten the lid with M8 x 35 torx screws. There are 3 screws per lid. Cover plate is used on the hole of the lifting handle: fasten the cover plate with screws.
4. Clean the surrounding area of installation material.
