

GreenStaxx patented modular multifamily products are:

- Predesigned / Pre-engineered
- Cost Saving
- Energy Efficient / High Quality
- Time Saving

GSX PROCESS

GreenStaxx licenses teams of Developers, Architects, GC's, and Subs to use GreenStaxx's process prior to a project getting underway.

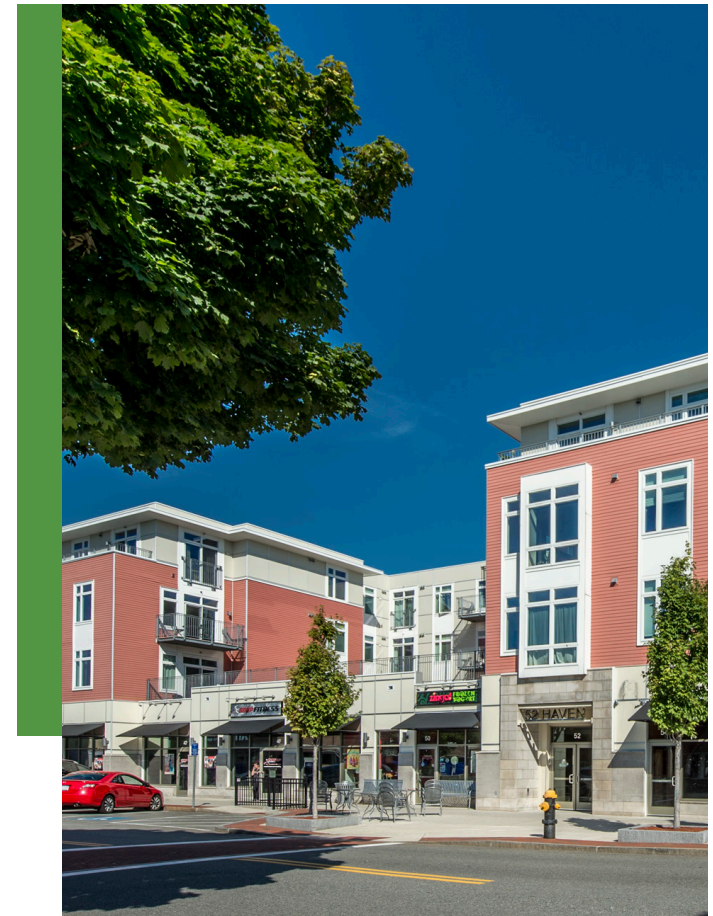

GreenStaxx teams have realized 11-13% savings in total project costs compared to conventional construction.

**A BREAKTHROUGH
SOLUTION FOR
MODULAR MULTIFAMILY
CONSTRUCTION**

green
STAXX

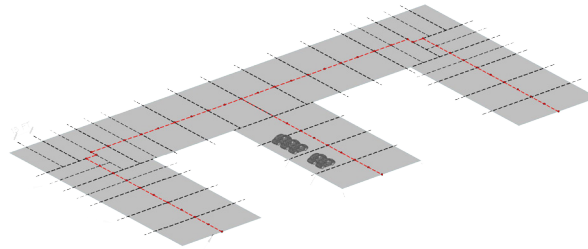

GSX LIBRARY

Units are predesigned modules. Options and customizations are available. Stacks and their shop drawings are used in multiple projects.

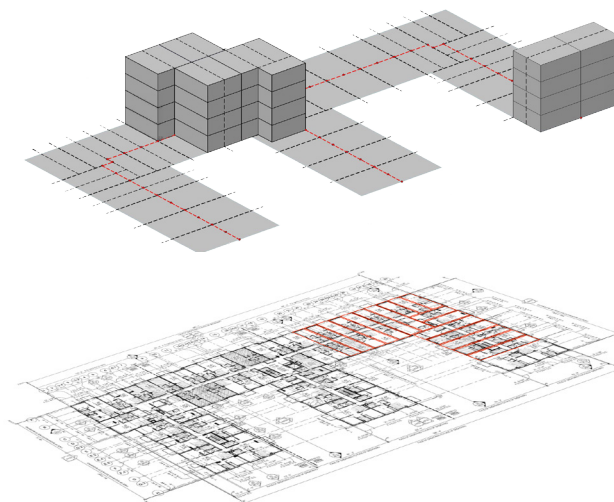

GSX GRID

The flexible grid adapts to site footprint. This allows infinite layout configurations.

GSX UNITS ADDED

Library units fit into the GSX grid and are stacked. A full set of construction drawings are the output.

The GreenStaxx patented process orchestrates and integrates a team of professionals, with significant benefits:

- The Developer saves money while bringing green, higher quality housing to market;
- The Architect's talents are liberated to expedite a creative site plan and custom building envelope;
- The Contractor can construct multifamily housing more predictably and efficiently, and move on;
- The Modular Manufacturer operates from well-conceived drawings, replicable for the next project.
