

Azure Accelerate

A Data-Driven Cloud Planning and Adoption Program

The benefits of cloud computing are significant, but the complexity of planning, building, and managing a cloud-based environment is difficult. That is why Blue Chip Consulting Group developed Azure Accelerate, a cloud adoption and planning program.

Azure Accelerate is designed to operationalize cloud adoption through structured analysis, financial planning, and roadmap development. Working with Blue Chip, clients can discover the ROI associated with moving workloads into the cloud, as well as build the roadmap to actually do it. Program deliverables include insights into server inventory, financial models, target-state architecture drawings, and detailed cloud roadmaps.

Delivered by analysts and architects with decades of complex project experience, this program accelerates Azure adoption by taking the guesswork out of planning and deployment.

Leveraging tools like Stratazone and Power BI, Blue Chip develops detailed financial models and reports to help clients determine the cost to run applications and workloads in Azure (IaaS, PaaS, SaaS).
